2

Ongoing business excluding divested activities with 4th quarter sales of USD 42 million in 2002

Sustained double-digit growth accelerates in fourth quarter: full-year Group sales up 19%; Pharmaceuticals climbs 18%; Consumer Health rises 24% driven by dynamic 60% sales growth in Sandoz

*Market-share gains lead to advance in rank to global #5 pharmaceuticals company**

Double-digit (16%) rise in full-year operating income driven by volume expansions, product mix enhancements and productivity gains

Net income increases 6% to new record level of USD 5.0 billion, lifting earnings per share by 8%

Free cash flow jumps 23% to USD 3.6 billion; dividend increase of 5% proposed

*

Based on IMS healthcare data, January - November 2002/3 17 countries

Unless otherwise stated, growth rates in USD and comments refer to full-year figures

1

Basel, 22 January 2004 Reviewing Novartis' 2003 full-year results, published today, Novartis Chairman and CEO Dr. Daniel Vasella said:

"2003 ended on a strong note as our sales grew dynamically, reaching record levels for the eighth time in our eight-year history. All of our businesses gained market share, based on our innovation-focused strategy. In pharmaceuticals, we moved up to the number-five rank worldwide. In research and development, we increased our investment by 32% and the build-up of our Novartis Institute for Biomedical Research progressed on track. We also expanded our pharmaceutical pipeline to 79 projects in clinical development and registration, promising sustainable future growth. Sandoz, our generics business unit, achieved an exceptionally strong growth of 60%. This combination of activities uniquely positions Novartis at the forefront of bringing better, innovative medicines to patients, as well as playing an important role in offering inexpensive, high quality generics."

Sales

Group sales up 19% to USD 24.9 billion

Full-year sales climbed 19% or 11% in local currencies (l.c.) with growth in the fourth quarter rising to 21% in USD. Eight percentage points of 2003 sales growth was driven by volume expansions, while acquired businesses contributed 2 percentage points and price increases a further 1 percentage point. The impact of translations from local currencies into USD accounted for 8 percentage points.

Throughout 2003, group sales were driven primarily by Pharmaceuticals and Sandoz. Collectively, the medicines businesses¹ grew sales by 22% and contributed 86% to total revenues.

1

Pharmaceuticals, Sandoz, OTC, Animal Health

Pharmaceuticals sales up 18% to USD 16.0 billion

The core Pharmaceuticals business achieved above-market growth² to post an 18% (11% in l.c.) rise in full-year sales on the back of a fourth quarter of sustained momentum (21%; 12% in l.c.).

In 2003, Novartis captured further share of the key US market (sales: +15% in l.c.) rising two places in the US healthcare company rankings. This and additional share gains in Japan (sales: +14% in l.c.), the second largest single market, and Europe (sales: +6% in l.c.) resulted in Novartis being the fastest growing among the ten largest pharmaceutical companies, according to IMS². As a result, the company climbed one rank globally to the number five position, with a 4.38% share of the global healthcare market.

2

Based on IMS data January - November 2002/3, the global healthcare market grew approximately 9% compared with Novartis healthcare 17%

The cardiovascular (+36%; +29% in l.c.) and oncology franchises (+36%; +26% in l.c.) continued to be the main drivers throughout the year, led in particular by *Diovan*, *Gleevec/Glivec*, *Zometa*, *Lotrel* and *Lescol*, with sales growth boosted by the contributions of newly launched products including *Elidel* and *Zelnorm/Zelmac*.

Highlights on the key brands are presented below.

2

Consumer Health sales up 24% to USD 8.8 billion

Full-year sales of Consumer Health's ongoing business grew a substantial 24% (+16% in l.c.) as all of the business units outperformed their markets. Top-line growth was driven mainly by Sandoz and fuelled throughout the year by the other businesses, of which OTC (over-the-counter medicines), CIBA Vision and Medical Nutrition all delivered double-digit sales increases in USD. Dynamic sales growth in the fourth-quarter was led by OTC, CIBA Vision and Sandoz, each of which posted increases of more than 20% in USD.

Sandoz' (+60%; +47% in l.c.) full-year sales were driven by the US retail pharmaceuticals business and the successful integration of Lek, which contributed 38 percentage points to sales growth and 37 percentage points in the fourth quarter. Sandoz posted strong sales growth (+43%; 31% in l.c.) in the fourth quarter versus the prior year, despite lower prices and more intense competition for *AmoxC* (a generic version of Augmentin®³). The fourth-quarter also included the acquisition of Amifarma in Spain, strengthening in-house antibiotics production capacity and technology.

3

Augmentin® is a trademark of GlaxoSmithKline

Among the other business unit highlights, OTC full-year sales were boosted by the exceptional contribution of loratadine in the US, the performance of its core strategic brands and strong fourth-quarter sales of cough and cold remedies.

3

Group operating income rises 16% to USD 5.9 billion

Full-year operating income grew 16% driven by dynamic sales and productivity gains. Bold investments in pharmaceutical research and development, in particular the research expansion in Cambridge, Massachusetts, and the addition of new development projects led to a significant overall increase of 32% in Research & Development investments to 15.1% of sales. Thanks to continued productivity gains and product-mix improvements, the cost of goods sold grew slower than sales, as did Marketing & Sales investments. General & Administration expenses increased as a proportion of sales, owing to several factors including a USD 216 million impairment of tangible, intangible and other financial assets. On the other hand, General & Administration expenses were reduced by USD 90 million owing to the release of litigation provisions related to *AmoxC*. With the overall full-year operating result improving to USD 5.9 billion, the operating margin was 23.7%, 0.7 percentage points off the previous year's level, in line with expectations.

Pharmaceuticals operating income climbs 14% to USD 4.4 billion

Earnings growth accelerated in the year as sales continued to expand strongly. The cost of goods sold, as well as investments in Marketing & Sales, increased slower than sales over the prior year. Research & Development increased substantially and reached 19.1% of sales, reflecting payments of USD 151 million related to development milestones and in-licensing deals, in addition to the sustained high-level investment in the new Cambridge facility. General & Administration costs increased from 5.9% to 6.0% of sales owing to increased royalties, foreign exchange fluctuations and an increase in product liability insurance costs. This was partially offset by one-time gains on the sale of non-core products, primarily the *Fioricet* and *Fiorinal* lines for USD 178 million.

Consumer Health operating income rises 40% to USD 1.3 billion

Operating income from Consumer Health's ongoing business rose 40% in 2003, outpacing sales and driven in particular by Sandoz (+78%). Overall continued productivity gains, lower material costs, and the focus on higher-margin products contributed to a reduction in the cost of goods sold as a percentage of sales. Marketing & Sales investments were maintained at the previous year's level to drive new products and recent launches and to support key brands. On the other hand, Research & Development investments grew as a proportion of sales mainly due to the expansion at Sandoz and licensing agreements. General & Administration costs increased mainly on account of the impairment of intangible assets of USD 72 million related to Azupharma. The overall increase was, however, slower than sales owing to the release of USD 49 million of provisions following the successful conclusion of litigation with GSK.

With almost all business units achieving margin improvements, the profit margin of the Division's ongoing businesses improved from 13.2% in 2002 to 14.9% in 2003.

Group net income

Full-year group net income reached a record USD 5.0 billion. At 6%, growth was less pronounced than at the operating income level because non-operating income from associated companies and financial investments were significantly reduced. Earnings per share expanded by 8% to USD 2.03.

On the basis of the strong 2003 performance, a dividend increase of 5% to CHF 1.00 will be proposed to the shareholders' AGM on 24 February 2004.

Board of Directors

With effect of the date of the AGM, Walter G. Frehner and Heini Lippuner are retiring from the Board of Directors, having reached the age limit. The Board also proposes the re-elections of Prof. Helmut Sihler, Hans-Jörg Rudloff and Dr. Daniel Vasella for a three-year term each.

Group outlook (barring any unforeseen events)

Novartis expects to deliver strong top-line growth ahead of the market and in the high single-digit range in local currencies, driven by key pharmaceutical brands, seven of which are forecast to be blockbusters by 2008, and boosted by the launch and roll-out of attractive new products.

The rapid build-up of the Cambridge research center is scheduled for completion in 2004. At the same time, Development investments are expected to grow strongly reflecting the rich late-stage pharmaceutical pipeline. Research & Development investments are, therefore, projected to continue to increase overproportionately in 2004, underscoring Novartis' commitment to bringing innovative therapies to patients.

Barring unforeseen events, both full-year operating and net income are expected to exceed the 2003 levels.

Pharmaceutical business and key product highlights

Primary Care

Diovan (+46%; +38% in l.c.; US: +42%) became the world's leading angiotensin receptor blocker (ARB) in March and has continued to capture further market share from its competitors. With the heart failure indication now approved in more than 40 markets, the flagship brand has continued to outpace its fast-growing ARB segment with year-to-date sales in the US alone surpassing the USD 1 billion mark by December.

The fourth quarter was marked by the publication of the VALIANT mega-trial at the American Heart Association Scientific Session. The positive results are an important milestone making *Diovan* the first and only ARB to demonstrate a significant improvement in morbidity and mortality in post-myocardial infarction patients, reducing death by 25%. These data provide compelling evidence towards establishing *Diovan* as the new gold standard in the treatment of hypertension. A supplemental new drug application based on these results has already been filed in the US.

Diovan HCT/Co-Diovan became the most prescribed product in the combination ARB segment in the US. This rapid growth was powered by the roll-out of new dosage forms and new treatment guidelines. In Germany, the flagship brand secured the number-one rank in this segment,

buoyed by the success of *Co-Diovan 160/12.5 mg*.

Lotrel (US: +20%), the leading combination treatment for hypertension, posted strong full-year prescription growth while fourth-quarter sales were spurred by a disease awareness campaign launched in August. Overall, the brand steadily gained segment share as a result of: new guidelines recommending more aggressive treatment; a new focus on patients who are not controlled by ACE inhibitors and calcium channel blockers; and the successful launch of the new dosage strength (10/20 mg), which adds efficacy and dosing flexibility.

Lescol (+27%; +18% in l.c.; US: +19%; cholesterol reduction) continued strong sales growth driven by proven benefits in high-risk patients, the successful roll-out of the XL formulation in France, Italy and Spain and the launch of the secondary prevention indication in the US.

Elidel (+147%; +144% in l.c.; US: +125%; non-steroid eczema treatment) notched up full-year sales of USD 235 million, generated predominantly in the US. In less than two years since its first launch, *Elidel* is the clear number-one branded prescription treatment for eczema and is now available in more than 38 markets.

Zelnorm/Zelmac (irritable bowel syndrome with constipation) revenues exceeded USD 165 million (US: USD 132 million) reflecting the product's therapeutic benefits and the increase in disease awareness. Total US prescriptions, as well as new prescriptions, grew 32% in the fourth quarter. *Zelnorm/Zelmac* has now been launched in 39 countries and was filed, in the fourth quarter, for the new indication of chronic constipation in the US.

Oncology

Gleevec/Glivec (+84%; +68% in l.c.; US: +41%), for chronic myeloid leukemia (CML) and gastro-intestinal stromal tumors (GIST), continued to grow dynamically, boosted by its use as first-line therapy and its approval for GIST in the US, Europe and Japan. The number of patients reached by the *Gleevec/Glivec* Patient Assistance Program rose to more than 8000 worldwide, providing treatment to many needy patients who otherwise would not have access.

5

Zometa (+83%; +74% in l.c.; US: +59%), the most prescribed intravenous bisphosphonate for bone metastases, continued to post dynamic growth and is on track to become a blockbuster in 2004. Reimbursement in the EU and elsewhere for the bone metastases indication fuelled additional growth, as did the continued expanded use in a number of tumor types including lung, prostate, multiple myeloma, and breast.

Femara (first-line therapy for advanced breast cancer in postmenopausal women) achieved a 30% rise (+18% in l.c.; US: +22%) in sales supported by its strong profile and the landmark results of the MA-17 extended adjuvant study published in the fourth quarter. These showed a 43% reduction in the risk of cancer recurrence, in addition to significantly improved disease-free survival in postmenopausal women with early breast cancer, who had completed five years of tamoxifen.

Fourth-quarter regulatory and clinical highlights

Novartis published a comprehensive update on its current pharmaceutical pipeline at its "R&D Day" event in November. With median development times among the shortest in the industry, Novartis has been rated by analysts as having the industry's highest development productivity in terms of pipeline value and development costs⁴. Its full pipeline includes 10 new medicines in late-stage development with potential combined peak sales anticipated to be in excess of USD 10 billion and 79 development projects in total of which 64 are in Phases II/III or registration.

4

Goldman Sachs Global Equity Report, 29 September 2003.

Major approvals and launches

Further progress was made on the regulatory front in the fourth quarter, helping to bring new treatments to transplant recipients and patients suffering from diseases such as Parkinson's disease and urinary incontinence. Overall, Novartis obtained seven major market approvals in 2003, three of which came in the fourth quarter.

Edgar Filing: NOVARTIS AG - Form 6-K

Certican, which targets the primary causes of allograft dysfunction, including acute rejection, secured approvals in 15 EU member states for the prevention of rejection in kidney and heart transplantation in combination with *Neoral*. Approvable status was received in the US in November.

Enablex, the novel M3 antagonist treatment for overactive bladder, received an approvable letter from FDA in October.

Gleevec/Glivec 100mg and 400mg film-coated tablets were approved in Europe in November.

Lotrel also received an approvable letter from the FDA for two new strengths (5/40 and 10/40) to broaden the range of treatment options.

Myfortic (transplantation) gained approval in France in November and the mutual recognition procedure in Europe is ongoing. *Myfortic* has now gained approval in 36 countries.

Stalevo (Parkinson's disease) gained marketing approval in the EU in October, following the successful launch in the US in September.

Visudyne (treatment of age-related macular degeneration) gained approval in Japan in October, with subsequent approval, in December, of the Zeiss laser used with this innovative therapy.

6

Corporate

Corporate income/expense, net

Net corporate income rose USD 31 million from the previous year's level to USD 146 million. Higher income was generated from charging share and share option plan costs to the operations. In addition, there was a gain of USD 41 million as liabilities related to *AmoxC* litigation were settled at less than the amount provided for. Overall, these factors more than offset the increased investments in Corporate research and the reduction in pension income.

Financial income, net

Net financial income declined, as expected, by USD 234 million to USD 379 million, reflecting the persistently low interest rate environment and lower level of net liquidity than in the prior year. The overall return on net liquidity amounted to 5.2%.

Result from associated companies

Novartis' stake in Chiron Corporation generated an income of USD 134 million, whereas the stake in Roche Holding AG yielded a full-year pre-tax loss of USD 354 million, USD 269 million of which was due to Novartis' share in the associated company's unexpected loss of CHF 4.0 billion in 2002, reported by Roche, and hence booked by Novartis, only in 2003. The remainder represents an estimate of Novartis' share (USD 185 million) in Roche's 2003 pre-tax income based on independent analysts' forecasts for the full year. This was reduced by a USD 270 million goodwill and intangible depreciation charge. In total, associated companies resulted in an overall expense of USD 200 million.

Strong balance sheet

In July 2002, Novartis started a third program to repurchase shares via a second trading line on the SWX Swiss Exchange. Since its initiation, 46.9 million shares have been repurchased in this program for a total of USD 1.9 billion. Of these, 24.3 million shares were repurchased in 2003 for an approximate total of USD 939 million and shares were sold for USD 666 million on the first trading line. As of 31 December 2003, the Group held approximately 334 million shares in treasury.

Following changes in US GAAP and expected changes in IFRS (formerly IAS) accounting rules, Novartis decided in June 2003 to redeem, in advance, equity instruments (put and call options on Novartis shares) that were sold to Deutsche Bank in 2001. This resulted in an equity reduction of USD 3.5 billion.

Overall, the Group's equity increased from USD 28.3 billion at 31 December 2002 to USD 30.4 billion at 31 December 2003. The Group's 2003 net income of USD 5.0 billion, translation gains of USD 2.4 billion, and fair value adjustments on financial instruments of USD 0.2 billion were partly offset by payments for dividends (USD 1.7 billion), equity instrument repayments (USD 3.5 billion) and the acquisition of treasury shares

Edgar Filing: NOVARTIS AG - Form 6-K

(USD 0.3 billion). In the same period, total financial debts rose USD 0.4 billion. As a result there was no change in the year-end debt/equity ratio, which was 0.20:1 on 31 December 2003.

Novartis thus maintained the strength of its balance sheet at 31 December 2003 and continues to be rated AAA by Standard & Poor's and Moody's, a rating it has held since its creation in 1996. Novartis is now one of just two European-based companies with this rating.

Cash flow

The strong business expansion and good working capital management boosted cash flow from operating activities, which increased 27% to USD 6.7 billion.

7

Cash outflow for investing activities amounted to USD 1.3 billion. Capital expenditure increased 24% to USD 1.3 billion and now represents 5% of sales, while USD 465 million was spent on the acquisition of subsidiaries, principally 51% of Idenix acquired in the first half, and the investments in intangible and financial assets. This was offset by a significant inflow of USD 496 million from the sale of marketable securities and other assets.

At USD 3.6 billion, free cash flow jumped 23% from the prior year level. Boosted by a USD 457 million reduction in net operating assets, operating cash flow improved USD 1.4 billion, more than offsetting the dividend increase of USD 357 million, additional investments of USD 261 million in tangible fixed assets, and USD 124 million in intangible assets.

Overall, liquidity (cash, cash equivalents and marketable securities including financial derivative assets) amounted to USD 13.3 billion at 31 December 2003. After deducting financial debt and derivative liabilities, net liquidity stood at USD 7.3 billion, USD 0.3 billion higher than at 31 December 2002, despite the redemption of the equity instruments.

Disclaimer

This release contains certain "forward-looking statements", relating to the Group's business, which can be identified by the use of forward-looking terminology such as "forecast", "Outlook", "expects", "expected", "projected", "scheduled", "potential", "anticipated" or similar expressions, or express or implied discussions regarding potential future sales of existing products, potential new products or potential new indications for existing products, or by other discussions of strategy, plans or intentions. Such statements reflect the current views of the Group with respect to future events and are subject to certain risks, uncertainties and assumptions. There can be no guarantee that existing products will reach any particular sales levels, or that any new products will be approved for sale in any market, or that any new indications will be approved for existing products in any market. In particular, management's expectations could be affected by, among other things, new clinical data; unexpected clinical trial results; unexpected regulatory actions or delays or government regulation generally; the company's ability to obtain or maintain patent or other proprietary intellectual property protection; competition in general; government pricing pressures and other risks and factors referred to in the Company's current Form 20-F on file with the US Securities and Exchange Commission. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described herein as anticipated, believed, estimated or expected. Novartis is providing the information in this press release as of this date and does not undertake any obligation to update any forward-looking statements contained in this press release as a result of new information, future events or otherwise.

Novartis AG (NYSE: NVS) is a world leader in pharmaceuticals and consumer health. In 2003, the Group's businesses achieved sales of USD 24.9 billion and a net income of USD 5.0 billion. The Group invested approximately USD 3.8 billion in R&D. Headquartered in Basel, Switzerland, Novartis Group companies employ about 78 500 people and operate in over 140 countries around the world.
