ITEM 2.02. RESULTS OF OPERATIONS AND FINANCIAL CONDITION.

On February 6, 2009, White Mountains Insurance Group, Ltd. issued a press release announcing its results for the three months and year ended December 31, 2008. White Mountains reported an adjusted book value per share of \$353 at December 31, 2008, a decrease of 20% for the year, including dividends. Adjusted book value per share decreased by 8% in the fourth quarter, excluding the \$22 per share reduction resulting from the completion in October of the exchange transaction with Berkshire Hathaway. Including the reduction resulting from the exchange transaction, adjusted book value per share decreased 13%. The press release furnished herewith is attached as Exhibit 99.1 to this Form 8-K.

Certain information included in the press release constitutes non-GAAP financial measures (as defined in Regulation G of the Securities and Exchange Commission). Specifically, non-GAAP financial measures disclosed in the press release are adjusted comprehensive net income, adjusted book value per share and adjusted book value per common share at OneBeacon. White Mountains believes these measures to be more relevant than comparable GAAP measures in evaluating White Mountains' financial performance.

Adjusted comprehensive net income is a non-GAAP financial measure that excludes the change in net unrealized gains and losses from Symetra's fixed maturity portfolio from comprehensive net income. In the calculation of comprehensive net income under GAAP, fixed maturity investments are marked-to-market while the liabilities to which those assets are matched are not. Symetra attempts to earn a spread between what it earns on its investments and what it pays out on its products. In order to try to fix this spread, Symetra invests in a manner that tries to match the duration and cash flows of its investments with the required cash outflows associated with its life insurance and structured settlements products. As a result, Symetra typically earns the same spread on in-force business whether interest rates fall or rise. Further, at any given time, some of Symetra's structured settlement obligations may extend 40 or 50 years into the future, which is further out than the longest maturing fixed maturity investments regularly available for purchase in the market (typically 30 years). For these long-dated products, Symetra is unable to fully match the obligation with assets until the remaining expected payout schedule comes within the duration of securities available in the market. If at that time, these fixed maturity investments have yields that are lower than the yields expected when the structured settlement product was originally priced, the spread for the product will shrink and Symetra will ultimately harvest lower returns for its shareholders. GAAP comprehensive net income increases when rates decline, which would suggest an increase in the value of Symetra - the opposite of what is happening to the intrinsic value of the business. Therefore, White Mountains' management and Board of Directors use adjusted comprehensive net income when assessing Symetra's quarterly financial performance. A schedule is included in Exhibit 99.1 to this Form 8-K that reconciles the Company's comprehensive net income to adjusted comprehensive net income.

Adjusted book value per share is a non-GAAP measure which is derived by expanding the GAAP book value per share calculation to exclude net unrealized gains/ (losses) from Symetra's fixed maturity portfolio. In addition, the number of common shares outstanding used in the calculation of adjusted book value per share are adjusted to exclude unearned shares of restricted stock representative of the proportion of unamortized compensation cost at the date of the calculation to the value of the restricted stock on the date of issuance. A schedule is included in Exhibit 99.1 to this Form 8-K that reconciles the Company's book value per share to adjusted book value per share.

During the second quarter of 2008, White Mountains changed its principal financial reporting measure from fully diluted tangible book value per share to adjusted book value per share. Fully diluted tangible book value per share is a non-GAAP measure that differs from adjusted book value per share by excluding goodwill and other intangible assets. The change from fully diluted tangible book value per share to adjusted book value per share has been presented retroactively for all periods. As a result of the change, goodwill and other intangible assets are included in the calculation for all periods presented. For periods ended March 31, 2008 and prior, the Company had not recorded any significant intangible assets other than goodwill. The goodwill, which primarily relates to the FIN 46 consolidation of the Company's investment in the Tuckerman Funds, was \$20 million, \$27 million, \$30 million and \$29 million as of December 31, 2008, September 30, 2008, December 31, 2007 and September 30, 2007, respectively. The inclusion of goodwill in adjusted book value per share did not have a significant effect on the calculation of changes per share for any periods presented.

Edgar Filing: WHITE MOUNTAINS INSURANCE GROUP LTD - Form 8-K

Adjusted book value per common share at OneBeacon is a non-GAAP financial measure which is derived by excluding the impact of economically defeasing OneBeacon's mandatorily redeemable preferred stock from book value per common share, the most closely comparable GAAP measure. Management believes that adjusted book value per common share is a useful supplement to understanding the OneBeacon's earnings and profitability. A schedule is included in Exhibit 99.1 to this Form 8-K that reconciles OneBeacon's book value per common share to OneBeacon's adjusted book value per common share.

ITEM 9.01. FINANCIAL STATEMENTS AND EXHIBITS.
