**September 30, 2010 (unaudited)**

**Note A**

(1) Portfolio Valuation

Investment securities of RMR Real Estate Income Fund, or the Fund or RIF are valued at the latest sales price whenever that price is readily available on that day; securities for which no sales were reported on that day, unless otherwise noted, are valued at the average of the closing bid and ask prices on that day. Securities traded primarily on the NASDAQ Stock Market, or NASDAQ, are normally valued by RIF at the NASDAQ Official Closing Price, or NOCP, provided by NASDAQ each business day. The NOCP is the most recently reported price as of 4:00:02 p.m., eastern time, unless that price is outside the range of the inside bid and asked prices (i.e., the bid and asked prices that dealers quote to each other when trading for their own accounts); in that case, NASDAQ will adjust the price to equal the inside bid or asked price, whichever is closer. Some fixed income securities may be valued using values provided by a pricing service.

Any of the Fund's securities which are not readily marketable, which are not traded or which have other characteristics of illiquidity are valued by the Fund at fair value as determined in good faith under the supervision of the Fund's board of trustees. Numerous factors may be considered when determining fair value of a security, including cost at date of purchase, type of security, the nature and duration of restrictions on disposition of the security and whether the issuer of the security being fair valued has other securities of the same type outstanding. See Note A (2) for a further description of fair value measurements. Short term debt securities with less than 60 days until maturity may be valued at amortized cost plus interest accrued, which approximates market value.

(2) Fair Value Measurements

The Fund reports the value of its securities at their fair value. Fair value is defined as the price that the Fund would receive upon selling an investment in a timely transaction to an independent buyer in the principal or most advantageous market for the investment. When valuing portfolio securities, the Fund uses observable market data when possible and otherwise uses other significant observable or unobservable inputs for fair value measurements. Inputs refer broadly to the assumptions we believe that market participants would use in pricing the asset or liability, including assumptions about risk; for example, the risk inherent in using a particular valuation technique to measure fair value and the risk inherent in the inputs to the valuation technique. Inputs may be observable or unobservable. Observable inputs are inputs that reflect the assumptions market participants would use in valuing the asset or liability developed based on market data obtained from independent sources. Unobservable inputs are inputs that reflect the Fund's own assumptions about the assumptions market participants would use in pricing the asset or liability developed based on the best information available in the circumstances. The three-tier hierarchy of inputs used to value securities reported in these financial statements is summarized below:

- Level 1 quoted prices in active markets for identical investments.
- Level 2 other significant observable inputs (including quoted prices for similar investments, interest rates, credit risk, etc.).

## Edgar Filing: RMR Real Estate Income Fund - Form N-Q

- Level 3 – significant unobservable inputs (including the Fund’s own assumptions in determining the fair value of investments).

The following is a summary of the inputs used as of September 30, 2010, in valuing RIF’s investments carried at value:
