-

Item 7.01. Regulation FD Disclosure.

On April 17, 2012, Agenus Inc. reported that an abstract entitled, "*A Phase 2 multicenter trial of autologous heat shock protein-peptide vaccine (HSPPC-96; vitespen) for recurrent glioblastoma multiforme (GBM) patients shows improved survival compared to a contemporary cohort controlled for age, KPS and extent of resection,*" was presented by Dr. Andrew Parsa, Professor, Department of Neurological Surgery, University of California San Francisco, during Plenary Session II at the 80th American Association of Neurological Surgeons (AANS) Annual Scientific Meeting in Miami, Florida.

Further, the Cancer Therapy Evaluation Program of the National Cancer Institute (NCI) recently approved a study of the HSPPC-96 vaccine in a large, randomized Phase 2 trial in combination with bevacizumab in patients with surgically resectable recurrent GBM. The study, which is in its early planning stages, would be sponsored by the Alliance for Clinical Trials in Oncology (referred to as the "Alliance"), an NCI cooperative group formed by the merger of the American College of Surgeons Oncology Group, Cancer and Leukemia Group B, and the North Central Cancer Treatment Group.

The full text of the press release issued in connection with the announcement is being furnished as Exhibit 99.1 to this current report on Form 8-K.

Item 9.01. Financial Statements and Exhibits.
