MECHEL ANNOUNCES NEW EQUIPMENT COMMISSIONING AT ITS MECHEL CAMPIA TURZII SUBSIDIARY

Campia Turzii, Romania - November 30, 2009 - Mechel OAO (NYSE: MTL), one of the leading Russian mining and metals companies, announces completion of several investment projects at Mechel Campia Turzii plant (Romania, Campia Turzii), which is a part of Mechel OAO's East-European Steel Division.

The official commissioning of the new production lines at Mechel Campia Turzii that was held on November, 27 2009 was attended by Ioahn Vasinka, Campia Turzii City Major, Dahn Luchu, the District of Kluzh Prefecture representative, Vasile Soporan, Parliamentary Delegate of the District of Kluzh, Myrcha Skyntey, President of "Metarom" Federation of steel industry unions and other guests. Mechel's East-European Steel Division was represented by Viktor Dyshlevich, its Chief Executive Officer, Sergei Dikun, Chief Financial Officer of the Division and Gennady Somov, Chief Executive Officer of Mechel Campia Turzii plant. Three new production lines launched at the plant include: metal fiber production and packing line, reinforcing wire coils extension, enlargement line and steel wire production shop. Total investments in the projects amounted to 7 million Euro.

The line for metal fiber production and packing was supplied by the company Eurolls Italia, the line's planned production capacity is 3,000 tonnes per year. The finished product is metal fiber used for reinforcement of concrete. Fiber usage allows to reduce amount of metal in concrete constructions for several tens of times, it also considerably improves concrete's structure, solidity and operating live due to its even composition. After the project's commissioning, Mechel Campia Turzii will become one of the few manufactures of this product in Romania. This provides large opportunities for selling fiber at the domestic and international construction markets. The new production line's output fully complies with the EU standards in technical terms and meets all of the environmental requirements; technical process at the line provides elimination of the environment pollution.

The line for extension and enlargement of reinforcing wire coils was supplied by the Koch company (Germany) which is a world leader in production of such equipment. Planned production capacity of this line is 81,000 tonnes per year. The finished product is reinforcing wire of premium quality used for construction of industrial and civil objects in zones with increased seismic activity. Production line is a type of equipment with improved productivity and it manufactures coils of 2,500 - 5,000 kg weight. Heavy coils are more preferable for customers and are in high demand at the market. The product meets DIN 488 German standard, BST 500 mark.

The new equipment of the steel wire production shop includes up-to-date wire drawing mills and produces wire with high carbon content. Mechel Campia Turzii is one of the first plants in the Eastern Europe to commission this equipment which is delivered by the company Koch as well as the abovementioned machines. One of the lines makes drawing in a dimensional range from 2.8 to 4.5 mm and the other three lines make drawing in the dimensional range from 0.6 to 3 mm. Increase in efficiency is achieved by using rolled wire of 5.5 to 6 mm diameter packed in heavy coils of 2.5 tonnes weight. The finished product is supplied in Z2 and Z3 coils with weight range from 400 to 1,100 kg. The speed of wire-drawing is 30 meter per second, average monthly productivity is 1,000 tonnes. With the mechanical descaling system, which excludes using acid in the etching process, and double dust cleaning system the new wire-drawing equipment provide for the necessary working conditions and meet all environmental requirements.

Vladimir Polin, Mechel's Senior Vice-President noted:

"Completion of new projects at Mechel Campia Turzii plant is in line with Mechel's strategic investment programme. This stage is another step to modernize one of our Romanian subsidiaries. The commissioning of new equipment will allow us to significantly increase productivity and quality of the plant's products, reduce cost price and bring the plant's product portfolio in compliance with the current market needs. Today's event proves one more time that in spite of the world financial and economy crisis' negative impact, which seriously affected
