Trigger PLUS Based on the Value of the Worst Performing of the Dow Jones Industrial Average<sup>SM</sup> and the Russell 2000<sup>®</sup> Index due February 15, 2024

Trigger Performance Leveraged Upside Securities<sup>SM</sup>

Fully and Unconditionally Guaranteed by Morgan Stanley

Principal at Risk Securities

The Trigger PLUS are unsecured obligations of Morgan Stanley Finance LLC (“MSFL”) and are fully and unconditionally guaranteed by Morgan Stanley. The Trigger PLUS will pay no interest, do not guarantee any return of principal at maturity and have the terms described in the accompanying product supplement for PLUS, index supplement and prospectus, as supplemented or modified by this document. The payment at maturity on the Trigger PLUS will be based on the value of the worst performing of the Dow Jones Industrial Average<sup>SM</sup> and the Russell 2000<sup>®</sup> Index. At maturity, if the final index value of **each** underlying index is **greater than or equal to** its respective initial index value, investors will receive the stated principal amount of their investment *plus* leveraged upside performance of the worst performing underlying index. If the final index value of **either** underlying index is **less than** its respective initial index value but the final index value of **each** underlying index is **greater than or equal to** its respective trigger level, investors will receive the stated principal amount of their investment *plus* the specified fixed payment of \$200 per Trigger PLUS. However, if the final index value of **either** underlying index is **less than** its respective trigger level, the fixed payment feature will no longer be available and investors will be negatively exposed to the full decline in the worst performing underlying index and will lose 1% of the stated principal amount for every

1% of decline in the worst performing underlying index, without any buffer. Because the payment at maturity of the Trigger PLUS is based on the worst performing of the underlying indices, a decline in **either** underlying index beyond its respective trigger level will result in a significant loss of your investment even if the other underlying index has appreciated or has not declined as much. These long-dated Trigger PLUS are for investors who seek an equity index-based return and who are willing to risk their principal, risk exposure to the worst performing of two underlying indices and forgo current income in exchange for the leverage and fixed payment features that in each case apply to a limited range of performance of the worst performing underlying index. The Trigger PLUS are notes issued as part of MSFL's Series A Global Medium-Term Notes program.

The Trigger PLUS differ from the PLUS described in the accompanying product supplement for PLUS in that the Trigger PLUS offer the potential for a fixed positive return at maturity if the worst performing underlying index depreciates by no more than 35%. The Trigger PLUS are not the Buffered PLUS described in the accompanying product supplement for PLUS. Unlike the Buffered PLUS, the Trigger PLUS do not provide any protection if the worst performing underlying index depreciates by more than 35%.

**All payments are subject to our credit risk. If we default on our obligations, you could lose some or all of your investment. These Trigger PLUS are not secured obligations and you will not have any security interest in, or otherwise have any access to, any underlying reference asset or assets.**

#### FINAL TERMS

<b>Issuer:</b>	Morgan Stanley Finance LLC
<b>Guarantor:</b>	Morgan Stanley
<b>Maturity date:</b>	February 15, 2024
<b>Underlying indices:</b>	Dow Jones Industrial Average <sup>SM</sup> (the "INDU Index") and Russell 2000 <sup>®</sup> Index (the "RTY Index")
<b>Aggregate principal amount:</b>	\$630,000
	If the final index value of <b>each underlying index</b> is <i>greater than or equal to</i> its respective initial index value,
	$\$1,000 + (\$1,000 \times \text{leverage factor} \times \text{index percent change of the worst performing underlying index})$
	If the final index value of <b>either underlying index</b> is <i>less than</i> its respective initial index value but the final index value of <b>each underlying index</b> is <i>greater than or equal to</i> its respective trigger level,
<b>Payment at maturity:</b>	\$1,000 + the fixed payment
	If the final index value of <b>either underlying index</b> is <i>less than</i> its respective trigger level,
	$\$1,000 \times \text{index performance factor of the worst performing underlying index}$
	<i>Under these circumstances, the payment at maturity will be less than the stated principal amount of \$1,000, and will represent a loss of at least 35%, and possibly all, of your investment.</i>
<b>Index percent change:</b>	With respect to each underlying index, (final index value – initial index value) / initial index value

<b>Worst performing underlying index:</b>	The underlying index with the lesser index percent change		
<b>Index performance factor:</b>	With respect to each underlying index, final index value / initial index value		
<b>Fixed payment:</b>	\$200 per Trigger PLUS (20% of the stated principal amount), payable only if the final index value of <b>either</b> underlying index is less than its respective initial index value but the final index value of <b>each</b> underlying index is greater than or equal to its respective trigger level		
<b>Initial index value:</b>	With respect to the INDU Index, 25,053.11, which is the index closing value of such index on the pricing date		
<b>Final index value:</b>	With respect to the RTY Index, 1,518.982, which is the index closing value of such index on the pricing date		
<b>Valuation date:</b>	February 12, 2024, subject to adjustment for non-index business days and certain market disruption events		
<b>Leverage factor:</b>	156%		
<b>Trigger level:</b>	With respect to the INDU Index, 16,284.522, which is approximately 65% of the initial index value of such index		
<b>Stated principal amount:</b>	With respect to the RTY Index, 987.338, which is approximately 65% of the initial index value of such index		
<b>Issue price:</b>	\$1,000 per Trigger PLUS		
<b>Pricing date:</b>	\$1,000 per Trigger PLUS		
<b>Original issue date:</b>	February 11, 2019		
<b>CUSIP / ISIN:</b>	February 14, 2019 (3 business days after the pricing date)		
<b>Listing:</b>	61768DQ57 / US61768DQ578		
<b>Agent:</b>	The Trigger PLUS will not be listed on any securities exchange.		
<b>Estimated value on the pricing date:</b>	Morgan Stanley & Co. LLC (“MS & Co.”), a wholly owned subsidiary of Morgan Stanley and an affiliate of MSFL. See “Supplemental information regarding plan of distribution; conflicts of interest.”		
<b>Commissions and issue price:</b>	\$969.50 per Trigger PLUS. See “Investment Summary” on page 2.		
<b>Per Trigger PLUS</b>	<b>Price to public<sup>(1)</sup></b>	<b>Agent’s commissions<sup>(2)</sup></b>	<b>Proceeds to us<sup>(3)</sup></b>
<b>Total</b>	\$1,000	\$10	\$990
	\$630,000	\$6,300	\$623,700

(1) The Trigger PLUS will be sold only to investors purchasing the Trigger PLUS in fee-based advisory accounts.

MS & Co. expects to sell all of the Trigger PLUS that it purchases from us to an unaffiliated dealer at a price of \$990 per Trigger PLUS, for further sale to certain fee-based advisory accounts at the price to public of \$1,000 per (2) Trigger PLUS. MS & Co. will not receive a sales commission with respect to the Trigger PLUS. See “Supplemental information regarding plan of distribution; conflicts of interest.” For additional information, see “Plan of Distribution (Conflicts of Interest)” in the accompanying product supplement for PLUS.

(3) See “Use of proceeds and hedging” on page 21.

The Trigger PLUS involve risks not associated with an investment in ordinary debt securities. See “Risk Factors” beginning on page 8.

Morgan Stanley Finance LLC

Trigger PLUS Based on the Value of Worst Performing of the Dow Jones Industrial Average<sup>SM</sup> and the Russell 2000<sup>®</sup> Index due February 15, 2024

Trigger Performance Leveraged Upside Securities<sup>SM</sup>

Principal at Risk Securities

Investment Summary

Trigger Performance Leveraged Upside Securities

Principal at Risk Securities

The Trigger PLUS Based on the Value of the Worst Performing of the Dow Jones Industrial Average<sup>SM</sup> and the Russell 2000<sup>®</sup> Index due February 15, 2024 (the “Trigger PLUS”) can be used:

§ To gain exposure to the worst performing of two U.S. equity indices

§ To potentially outperform the worst performing of the Dow Jones Industrial Average<sup>SM</sup> and the Russell 2000<sup>®</sup> Index

To obtain a fixed positive return of 20% if the final index value of **either** underlying index is less than its respective § initial index value but the final index value of **each** underlying index is greater than or equal to its respective trigger level.

If the final index value of **either** underlying index is **less than** its respective trigger level, investors will be negatively exposed to the full amount of the percent decline in the worst performing underlying index and will lose 1% of the stated principal amount for every 1% of decline in the worst performing underlying index, without any buffer.

**Maturity:** Approximately 5 years

**Leverage factor:** 156%

\$200 per Trigger PLUS (20% of the stated principal amount), payable only if the final index value of **either** underlying index is less than its respective initial index value but the final index value of **each** underlying index is greater than or equal to its respective trigger level.

**Minimum**

**payment at maturity:** None. Investors may lose their entire initial investment in the Trigger PLUS.

**Trigger level:** With respect to each underlying index, 65% of the initial index value of such index  
**Coupon:** None  
**Listing:** The Trigger PLUS will not be listed on any securities exchange

The original issue price of each Trigger PLUS is \$1,000. This price includes costs associated with issuing, selling, structuring and hedging the Trigger PLUS, which are borne by you, and, consequently, the estimated value of the Trigger PLUS on the pricing date is less than \$1,000. We estimate that the value of each Trigger PLUS on the pricing date is \$969.50.

*What goes into the estimated value on the pricing date?*

In valuing the Trigger PLUS on the pricing date, we take into account that the Trigger PLUS comprise both a debt component and a performance-based component linked to the underlying indices. The estimated value of the Trigger PLUS is determined using our own pricing and valuation models, market inputs and assumptions relating to the underlying indices, instruments based on the underlying indices, volatility and other factors including current and expected interest rates, as well as an interest rate related to our secondary market credit spread, which is the implied interest rate at which our conventional fixed rate debt trades in the secondary market.

*What determines the economic terms of the Trigger PLUS?*

In determining the economic terms of the Trigger PLUS, including the leverage factor, the fixed payment and the trigger levels, we use an internal funding rate, which is likely to be lower than our secondary market credit spreads and therefore advantageous to us. If the issuing, selling, structuring and hedging costs borne by you were lower or if the internal funding rate were higher, one or more of the economic terms of the Trigger PLUS would be more favorable to you.

*What is the relationship between the estimated value on the pricing date and the secondary market price of the Trigger PLUS?*

The price at which MS & Co. purchases the Trigger PLUS in the secondary market, absent changes in market conditions, including those related to the underlying indices, may vary from, and be lower than, the estimated value on the pricing date, because the secondary market price takes into account our secondary market credit spread as well as the bid-offer spread that MS & Co. would charge in a secondary market transaction of this type and other factors. However, because the costs associated with issuing, selling, structuring and hedging the Trigger PLUS are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the Trigger PLUS in the secondary market, absent changes in market conditions, including those related to the underlying indices, and to our secondary market credit spreads, it would do so based on values higher than the estimated value. We expect that those higher values will also be reflected in your brokerage account statements.

Morgan Stanley Finance LLC

Trigger PLUS Based on the Value of Worst Performing of the Dow Jones Industrial Average<sup>SM</sup> and the Russell 2000<sup>®</sup> Index due February 15, 2024

Trigger Performance Leveraged Upside Securities<sup>SM</sup>

Principal at Risk Securities

Key Investment Rationale

The Trigger PLUS offer the potential for a fixed positive return of 20% if the final index value of **either** underlying index is less than its respective initial index value but the final index value of **each** underlying index is greater than or equal to its respective trigger level. At maturity, if the final index value of **each** underlying index is **greater than or equal to** its respective initial index value, investors will receive the stated principal amount of their investment *plus* leveraged upside performance of the worst performing underlying index. If the final index value of **either** underlying index is **less than** its respective initial index value but the final index value of **each** underlying index is **greater than or equal to** its respective trigger level, investors will receive the stated principal amount of their investment *plus* the specified fixed payment of \$200 per Trigger PLUS. However, if the final index value of **either** underlying index is **less than** its respective trigger level, the fixed payment feature will no longer be available and instead investors will be negatively exposed to the full decline in the worst performing underlying index and will lose 1% of the stated principal amount for every 1% of decline in the worst performing underlying index, without any buffer. **Investors may lose their entire initial investment in the Trigger PLUS. All payments on the Trigger PLUS are subject to our credit risk.**

**Leveraged Performance** The Trigger PLUS offer investors an opportunity to receive 156% of the positive return of the worst performing of the underlying indices if **both** underlying indices have appreciated in value.

**Fixed Payment Feature** The Trigger PLUS enable investors to obtain a fixed positive return if the final index value of **either** underlying index is **less than** its respective initial index value **but** the final index value of **each** underlying index is **greater than or equal to** its respective trigger level.

**Upside Scenario if Both Underlying Indices Appreciate** **Both** underlying indices increase in value, and, at maturity, the Trigger PLUS redeem for the stated principal amount of \$1,000 *plus* 156% of the index percent change of the worst performing underlying index.

**Fixed Payment Scenario** The final index value of **either** underlying index is **less than** its respective initial index value **but** the final index value of **each** underlying index is **greater than or equal to** its respective trigger level. In this case, the Trigger PLUS pay the stated principal amount of \$1,000 *plus* the specified fixed payment of \$200 per Trigger PLUS.

**Downside Scenario** The final index value of **either** underlying index is **less than** its respective trigger level.

In this case, the Trigger PLUS redeem for at least 35% less than the stated principal amount, and this decrease will be by an amount proportionate to the full decline in the value of the worst performing underlying index over the term of the Trigger PLUS. Under these circumstances, the payment at maturity will be less than 65% of the stated principal amount per Trigger PLUS. For example, if the final index value of the worst performing underlying index is 70% less than its initial index value, the Trigger PLUS will be redeemed at maturity for a loss of 70% of principal at \$300, or 30% of the stated principal amount. **There is no minimum payment at maturity on the Trigger PLUS, and you could lose your entire investment.**

Because the payment at maturity of the Trigger PLUS is based on the worst performing of the underlying indices, a decline in **either** underlying index beyond its respective trigger level will result in a significant loss of your investment even if the other underlying index has appreciated or has not declined as much.

Trigger PLUS Based on the Value of Worst Performing of the Dow Jones Industrial Average<sup>SM</sup> and the Russell 2000<sup>®</sup> Index due February 15, 2024

Trigger Performance Leveraged Upside Securities<sup>SM</sup>

Principal at Risk Securities

Hypothetical Examples

The following hypothetical examples illustrate how to calculate the payment at maturity on the Trigger PLUS. The following examples are for illustrative purposes only. The actual initial index value and trigger level for each underlying index are set forth on the cover of this document. Any payment at maturity on the Trigger PLUS is subject to our credit risk. The below examples are based on the following terms:

<b>Stated principal amount:</b>	\$1,000 per Trigger PLUS
<b>Leverage factor:</b>	156%
<b>Fixed payment:</b>	\$200 per Trigger PLUS (20% of the stated principal amount), payable only if the final index value of <b>either</b> underlying index is less than its respective initial index value but the final index value of <b>each</b> underlying index is greater than or equal to its respective trigger level.
<b>Hypothetical initial index value:</b>	With respect to the INDU Index: 26,000
	With respect to the RTY Index: 1,650
	With respect to the INDU Index: 16,900
<b>Hypothetical trigger level:</b>	With respect to the RTY Index: 1,072.50

**EXAMPLE 1: The final index value of each underlying index is greater than its respective initial index value.**

Final index value	INDU Index: 28,600
	RTY Index: 2,310
	INDU Index: $(28,600 - 26,000) / 26,000 =$
Index percent change	10%
	RTY Index: $(2,310 - 1,650) / 1,650 = 40\%$
Payment at maturity	$= \$1,000 + (\$1,000 \times$
	leverage factor $\times$
	index percent change
	of the worst
	performing

$$\begin{aligned} & \text{underlying index),} \\ & \$1,000 + (\$1,000 \times \\ & = 156\% \times 10\%) \\ & = \$1,156.00 \end{aligned}$$

In example 1, the final index values of both the INDU Index and the RTY Index are greater than their initial index values. The INDU Index has appreciated by 10% while the RTY Index has appreciated by 40%. Therefore, investors receive at maturity the stated principal amount *plus* 156% of the appreciation of the worst performing underlying index, which is the INDU Index in this example. Investors receive \$1,156.00 per Trigger PLUS at maturity.

February 2019 Page 5

Morgan Stanley Finance LLC

Trigger PLUS Based on the Value of Worst Performing of the Dow Jones Industrial Average<sup>SM</sup> and the Russell 2000<sup>®</sup> Index due February 15, 2024

Trigger Performance Leveraged Upside Securities<sup>SM</sup>

Principal at Risk Securities

**EXAMPLE 2: The final index value of one underlying index is greater than its respective initial index value while the**

**final index value of the other underlying index is less than its respective initial index value but greater than its respective trigger level.**

Final index value      INDU Index: 36,400  
                                   RTY Index: 1,402.50  
                                   INDU Index:  $(36,400 - 26,000) / 26,000 = 40\%$

Index percent change      RTY Index:  $(1,402.50 - 1,650) / 1,650 = -15\%$

Payment at maturity = \$1,000 + the fixed payment  
                                   = \$1,000 + \$200  
                                   = \$1,200

In example 2, the final index value of the INDU Index is greater than its respective initial value, while the final index value of the RTY Index is less than its respective initial index value but greater than its respective trigger level. While the INDU Index has appreciated by 40%, the RTY index has declined by 15%. Therefore, investors receive at maturity the stated principal amount *plus* the specified fixed payment of \$200. Investors receive \$1,200 per Trigger PLUS at maturity. In this example, investors receive a fixed positive return even though one of the underlying indices declined in value by 15%, because neither underlying index declined beyond its respective trigger level.

**EXAMPLE 3: The final index value of one underlying index is greater than its respective initial index value while the final index value of the other underlying index is less than its respective initial index value and trigger level.**

Final index value      INDU Index: 28,600  
                                   RTY Index: 825

Morgan Stanley Finance LLC

Trigger PLUS Based on the Value of Worst Performing of the Dow Jones Industrial Average<sup>SM</sup> and the Russell 2000<sup>®</sup> Index due February 15, 2024

Trigger Performance Leveraged Upside Securities<sup>SM</sup>

Principal at Risk Securities

**EXAMPLE 4: The final index value of each underlying index is less than its respective initial index value but is greater than its respective trigger level.**

Final index value	INDU Index: 22,100 RTY Index: 1,386
Index percent change	INDU Index: $(22,100 - 26,000) / 26,000 = -15\%$ RTY Index: $(1,386 - 1,650) / 1,650 = -16\%$
Payment at maturity	= \$1,000 + the fixed payment = \$1,000 + \$200 = \$1,200

In example 4, the final index value of each underlying index is less than its respective initial index value but is greater than its respective trigger level. The INDU Index has declined by 15% while the RTY Index has declined by 16%. Therefore, investors receive at maturity the stated principal amount *plus* the specified fixed payment of \$200. Investors receive \$1,200 per Trigger PLUS at maturity.

**EXAMPLE 5: The final index value of each underlying index is less than its respective trigger level.**

Final index value	INDU Index: 7,800 RTY Index: 660
Index percent change	INDU Index: $(7,800 - 26,000) / 26,000 = -70\%$ RTY Index: $(660 - 1,650) / 1,650 = -60\%$
Index performance factor	INDU Index: $7,800 / 26,000 = 30\%$

RTY Index: 660 /  
1,650 = 40%  
\$1,000 × (index  
performance factor  
Payment at maturity = of the worst  
performing  
underlying index)  
=\$1,000 × 30%  
=\$300

In example 5, the final index values of both the INDU Index and the RTY Index are less than their respective trigger levels. The INDU Index has declined by 70% while the RTY Index has declined by 60%. Therefore, investors lose the benefit of the fixed payment feature and are instead exposed to the negative performance of the INDU Index, which is the worst performing underlying index in this example. Therefore, investors receive a payment at maturity of \$300.

**Because the payment at maturity of the Trigger PLUS is based on the worst performing of the underlying indices, a decline in either underlying index beyond its respective trigger level will result in a significant loss of your investment even if the other underlying index has appreciated or has not declined as much.**

Risk Factors

*The following is a non-exhaustive list of certain key risk factors for investors in the Trigger PLUS. For further discussion of these and other risks, you should read the section entitled "Risk Factors" in the accompanying product supplement for PLUS, index supplement and prospectus. We also urge you to consult your investment, legal, tax, accounting and other advisers in connection with your investment in the Trigger PLUS.*

**The Trigger PLUS do not pay interest or guarantee the return of any principal.** The terms of the Trigger PLUS differ from those of ordinary debt securities in that the Trigger PLUS do not pay interest or guarantee the payment of any principal amount at maturity. If the final index value of **either** underlying index is **less than** its respective trigger level, the fixed payment feature will no longer be available and the payment at maturity will be an amount in cash § that is at least 35% less than the \$1,000 stated principal amount of each Trigger PLUS, and this decrease will be by an amount proportionate to the full amount of the decline in the value of the worst performing underlying index over the term of the Trigger PLUS, without any buffer. **There is no minimum payment at maturity on the Trigger PLUS, and, accordingly, you could lose your entire initial investment in the Trigger PLUS.**

**The fixed payment feature applies only if the final index value of either underlying index is less than its respective initial index value but the final index value of each underlying index is greater than or equal to its respective trigger level.** If the final index value of each underlying index is greater than its respective initial index § value, investors will receive the leveraged upside payment but will not receive the fixed payment. If the final index value of either underlying index is less than its respective trigger level, investors will not receive the fixed payment and will instead lose a significant portion or all of their investment.

**You are exposed to the price risk of both underlying indices.** Your return on the Trigger PLUS is not linked to a basket consisting of both underlying indices. Rather, it will be based upon the independent performance of each underlying index. Unlike an instrument with a return linked to a basket of underlying assets in which risk is mitigated and diversified among all the components of the basket, you will be exposed to the risks related to both § underlying indices. Poor performance by either underlying index over the term of the securities will negatively affect your return and will not be offset or mitigated by any positive performance by the other underlying index. If either underlying index declines to below its respective trigger level as of the valuation date, you will be exposed to the negative performance of the worst performing underlying index at maturity, and you will lose a significant portion or all of your investment, even if the other underlying index has appreciated or has not declined as much. Accordingly, your investment is subject to the price risk of both underlying indices.

§

**Because the Trigger PLUS are linked to the performance of the worst performing underlying index, you are exposed to greater risk of sustaining a significant loss on your investment than if the Trigger PLUS were linked to just one underlying index.** The risk that you will suffer a significant loss on your investment is greater if you invest in the Trigger PLUS as opposed to substantially similar securities that are linked to the performance of just one underlying index. With two underlying indices, it is more likely that either underlying index will decline to below its trigger level as of the valuation date than if the Trigger PLUS were linked to only one underlying index. Therefore it is more likely that you will suffer a significant loss on your investment.

**The market price will be influenced by many unpredictable factors.** Several factors will influence the value of the Trigger PLUS in the secondary market and the price at which MS & Co. may be willing to purchase or sell the Trigger PLUS in the secondary market, including the value, volatility and dividend yield of the underlying indices, interest and yield rates, time remaining to maturity, geopolitical conditions and economic, financial, political and regulatory or judicial events and any actual or anticipated changes in our credit ratings or credit spreads. Generally, § the longer the time remaining to maturity, the more the market price of the Trigger PLUS will be affected by the other factors described above. The levels of the underlying indices may be, and have recently been, extremely volatile, and we can give you no assurance that the volatility will lessen. See “Dow Jones Industrial Average<sup>SM</sup> Overview” and “Russell 2000<sup>SM</sup> Index Overview” below. You may receive less, and possibly significantly less, than the stated principal amount per Trigger PLUS if you try to sell your Trigger PLUS prior to maturity.

Morgan Stanley Finance LLC

Trigger PLUS Based on the Value of Worst Performing of the Dow Jones Industrial Average<sup>SM</sup> and the Russell 2000<sup>®</sup> Index due February 15, 2024

Trigger Performance Leveraged Upside Securities<sup>SM</sup>

Principal at Risk Securities

**The Trigger PLUS are subject to our credit risk, and any actual or anticipated changes to our credit ratings or credit spreads may adversely affect the market value of the Trigger PLUS.** You are dependent on our ability to pay all amounts due on the Trigger PLUS at maturity and therefore you are subject to our credit risk. If we default on its obligations under the Trigger PLUS, your investment would be at risk and you could lose some or all of your investment. As a result, the market value of the Trigger PLUS prior to maturity will be affected by changes in the market's view of our creditworthiness. Any actual or anticipated decline in our credit ratings or increase in the credit spreads charged by the market for taking our credit risk is likely to adversely affect the market value of the Trigger PLUS.

**As a finance subsidiary, MSFL has no independent operations and will have no independent assets.** As a finance subsidiary, MSFL has no independent operations beyond the issuance and administration of its securities and will have no independent assets available for distributions to holders of MSFL securities if they make claims in respect of such securities in a bankruptcy, resolution or similar proceeding. Accordingly, any recoveries by such holders will be limited to those available under the related guarantee by Morgan Stanley and that guarantee will rank *pari passu* with all other unsecured, unsubordinated obligations of Morgan Stanley. Holders will have recourse only to a single claim against Morgan Stanley and its assets under the guarantee. Holders of securities issued by MSFL should accordingly assume that in any such proceedings they would not have any priority over and should be treated *pari passu* with the claims of other unsecured, unsubordinated creditors of Morgan Stanley, including holders of Morgan Stanley-issued securities.

**The Trigger PLUS are linked to the Russell 2000<sup>®</sup> Index and are subject to risks associated with small-capitalization companies.** As the Russell 2000<sup>®</sup> Index is one of the underlying indices, and the Russell 2000<sup>®</sup> Index consists of stocks issued by companies with relatively small market capitalization, the Trigger PLUS are linked to the value of small-capitalization companies. These companies often have greater stock price volatility, lower trading volume and less liquidity than large-capitalization companies and therefore the Russell 2000<sup>®</sup> Index may be more volatile than indices that consist of stocks issued by large-capitalization companies. Stock prices of small-capitalization companies are also more vulnerable than those of large-capitalization companies to adverse business and economic developments, and the stocks of small-capitalization companies may be thinly traded. In addition, small capitalization companies are typically less well-established and less stable financially than large-capitalization companies and may depend on a small number of key personnel, making them more vulnerable to loss of personnel. Such companies tend to have smaller revenues, less diverse product lines, smaller shares of their product or service markets, fewer financial resources and less competitive strengths than large-capitalization companies and are more susceptible to adverse developments related to their products.

**§ The amount payable on the Trigger PLUS is not linked to the values of the underlying indices at any time other than the valuation date.** The final index value of each underlying index will be based on the index closing value of such index on the valuation date, subject to adjustment for non-index business days and certain market disruption events. Even if both underlying indices appreciate prior to the valuation date but the value of **either** underlying index drops by the valuation date to below its respective trigger level, the payment at maturity will be

significantly less than it would have been had the payment at maturity been linked to the values of the underlying indices prior to such drop. Although the actual values of the underlying indices on the stated maturity date or at other times during the term of the Trigger PLUS may be higher than their respective trigger levels, the payment at maturity will be based solely on the index closing values on the valuation date.

**Investing in the Trigger PLUS is not equivalent to investing in either underlying index.** Investing in the Trigger PLUS is not equivalent to investing in either underlying index or the component stocks of either underlying index. § Investors in the Trigger PLUS will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to stocks that constitute either underlying index.

**Adjustments to the underlying indices could adversely affect the value of the Trigger PLUS.** The publisher of either underlying index may add, delete or substitute the stocks constituting such underlying index or make other methodological changes that could change the value of such underlying index. The publisher of either underlying § index may discontinue or suspend calculation or publication of such underlying index at any time. In these circumstances, the calculation agent will have the sole discretion to substitute a successor index that is comparable to the discontinued

Principal at Risk Securities

underlying index and will be permitted to consider indices that are calculated and published by the calculation agent or any of its affiliates.

**The rate we are willing to pay for securities of this type, maturity and issuance size is likely to be lower than the rate implied by our secondary market credit spreads and advantageous to us. Both the lower rate and the inclusion of costs associated with issuing, selling, structuring and hedging the Trigger PLUS in the original issue price reduce the economic terms of the Trigger PLUS, cause the estimated value of the Trigger PLUS to be less than the original issue price and will adversely affect secondary market prices.** Assuming no change in § market conditions or any other relevant factors, the prices, if any, at which dealers, including MS & Co., may be willing to purchase the Trigger PLUS in secondary market transactions will likely be significantly lower than the original issue price, because secondary market prices will exclude the issuing, selling, structuring and hedging-related costs that are included in the original issue price and borne by you and because the secondary market prices will reflect our secondary market credit spreads and the bid-offer spread that any dealer would charge in a secondary market transaction of this type as well as other factors.

The inclusion of the costs of issuing, selling, structuring and hedging the Trigger PLUS in the original issue price and the lower rate we are willing to pay as issuer make the economic terms of the Trigger PLUS less favorable to you than they otherwise would be.

However, because the costs associated with issuing, selling, structuring and hedging the Trigger PLUS are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the Trigger PLUS in the secondary market, absent changes in market conditions, including those related to the underlying index, and to our secondary market credit spreads, it would do so based on values higher than the estimated value, and we expect that those higher values will also be reflected in your brokerage account statements.

**§ The estimated value of the Trigger PLUS is determined by reference to our pricing and valuation models, which may differ from those of other dealers and is not a maximum or minimum secondary market price.**

These pricing and valuation models are proprietary and rely in part on subjective views of certain market inputs and certain assumptions about future events, which may prove to be incorrect. As a result, because there is no market-standard way to value these types of securities, our models may yield a higher estimated value of the Trigger PLUS than those generated by others, including other dealers in the market, if they attempted to value the Trigger PLUS. In addition, the estimated value on the pricing date does not represent a minimum or maximum price at which dealers, including MS & Co., would be willing to purchase your Trigger PLUS in the secondary market (if any exists) at any time. The value of your Trigger PLUS at any time after the date of this document will vary based on many factors that cannot be predicted with accuracy, including our creditworthiness and changes in market

conditions. See also “The market price will be influenced by many unpredictable factors” above.

§ **The Trigger PLUS will not be listed on any securities exchange and secondary trading may be limited.** The Trigger PLUS will not be listed on any securities exchange. Therefore, there may be little or no secondary market for the Trigger PLUS. MS & Co. may, but is not obligated to, make a market in the Trigger PLUS and, if it once chooses to make a market, may cease doing so at any time. When it does make a market, it will generally do so for transactions of routine secondary market size at prices based on its estimate of the current value of the Trigger PLUS, taking into account its bid/offer spread, our credit spreads, market volatility, the notional size of the proposed sale, the cost of unwinding any related hedging positions, the time remaining to maturity and the likelihood that it will be able to resell the Trigger PLUS. Even if there is a secondary market, it may not provide enough liquidity to allow you to trade or sell the Trigger PLUS easily. Since other broker-dealers may not participate significantly in the secondary market for the Trigger PLUS, the price at which you may be able to trade your Trigger PLUS is likely to depend on the price, if any, at which MS & Co. is willing to transact. If, at any time, MS & Co. were to cease making a market in the Trigger PLUS, it is likely that there would be no secondary market for the Trigger PLUS. Accordingly, you should be willing to hold your Trigger PLUS to maturity.

§ **Hedging and trading activity by our affiliates could potentially adversely affect the value of the Trigger PLUS.** One or more of our affiliates and/or third-party dealers have carried out, and will continue to carry out, hedging activities related to the Trigger PLUS (and possibly to other instruments linked to the underlying indices or their component stocks), including trading in the stocks that constitute the underlying indices as well as in other instruments related to

Principal at Risk Securities

the underlying indices. As a result, these entities may be unwinding or adjusting hedge positions during the term of the Trigger PLUS, and the hedging strategy may involve greater and more frequent dynamic adjustments to the hedge as the valuation date approaches. Some of our affiliates also trade the stocks that constitute the underlying indices and other financial instruments related to the underlying indices on a regular basis as part of their general broker-dealer and other businesses. Any of these hedging or trading activities on or prior to the pricing date could have affected the initial index value of either underlying index, and, therefore, could have increased the value at or above which such underlying index must close on the valuation date so that investors do not suffer a significant loss on their initial investment in the Trigger PLUS (depending also on the performance of the other underlying index). Additionally, such hedging or trading activities during the term of the Trigger PLUS, including on the valuation date, could adversely affect the value of either underlying index on the valuation date, and, accordingly, the amount of cash an investor will receive at maturity, if any (depending also on the performance of the other underlying index).

**The calculation agent, which is a subsidiary of Morgan Stanley and an affiliate of MSFL, will make determinations with respect to the Trigger PLUS.** As calculation agent, MS & Co. has determined the initial index values and the trigger levels, will determine the final index values, including whether any underlying index has decreased to below its respective trigger level, and will calculate the amount of cash you receive at maturity, if any. Moreover, certain determinations made by MS & Co., in its capacity as calculation agent, may require it to exercise § discretion and make subjective judgments, such as with respect to the occurrence or non-occurrence of market disruption events and the selection of a successor index or calculation of the final index value in the event of a market disruption event or discontinuance of an underlying index. These potentially subjective determinations may adversely affect the payout to you at maturity, if any. For further information regarding these types of determinations, see “Description of PLUS—Postponement of Valuation Date(s),” “—Alternate Exchange Calculation in case of an Event of Default” and “—Calculation Agent and Calculations” in the accompanying product supplement. In addition, MS & Co. has determined the estimated value of the Trigger PLUS on the pricing date.

§ **The U.S. federal income tax consequences of an investment in the Trigger PLUS are uncertain.** Please read the discussion under “Additional Information—Tax considerations” in this document and the discussion under “United States Federal Taxation” in the accompanying product supplement for PLUS (together, the “Tax Disclosure Sections”) concerning the U.S. federal income tax consequences of an investment in the Trigger PLUS. If the Internal Revenue Service (the “IRS”) were successful in asserting an alternative treatment, the timing and character of income on the Trigger PLUS might differ significantly from the tax treatment described in the Tax Disclosure Sections. For example, under one possible treatment, the IRS could seek to recharacterize the Trigger PLUS as debt instruments. In that event, U.S. Holders would be required to accrue into income original issue discount on the Trigger PLUS every year at a “comparable yield” determined at the time of issuance and recognize all income and gain in respect of the Trigger PLUS as ordinary income. Additionally, as discussed under “United States Federal Taxation—FATCA” in the accompanying product supplement for PLUS, the withholding rules commonly referred to as “FATCA” would apply to the Trigger PLUS if they were recharacterized as debt instruments. However, recently proposed regulations (the preamble to which specifies that taxpayers are

permitted to rely on them pending finalization) eliminate the withholding requirement on payments of gross proceeds of a taxable disposition. The risk that financial instruments providing for buffers, triggers or similar downside protection features, such as the Trigger PLUS, would be recharacterized as debt is greater than the risk of recharacterization for comparable financial instruments that do not have such features. We do not plan to request a ruling from the IRS regarding the tax treatment of the Trigger PLUS, and the IRS or a court may not agree with the tax treatment described in the Tax Disclosure Sections.

In 2007, the U.S. Treasury Department and the IRS released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments. The notice focuses in particular on whether to require holders of these instruments to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; whether short-term instruments should be subject to any such accrual regime; the relevance of factors such as the exchange-traded status of the instruments and the nature of the underlying property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals) realized by non-U.S. investors should be subject to withholding tax; and whether these instruments are or should be subject to the “constructive ownership” rule, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose an interest charge. While

the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the Trigger PLUS, possibly with retroactive effect. Both U.S. and Non-U.S. Holders should consult their tax advisers regarding the U.S. federal income tax consequences of an investment in the Trigger PLUS, including possible alternative treatments, the issues presented by this notice and any tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

Dow Jones Industrial Average<sup>SM</sup> Overview

The Dow Jones Industrial Average<sup>SM</sup> is a price-weighted index composed of 30 common stocks that is published by S&P Dow Jones Indices LLC, the marketing name and a licensed trademark of CME Group Index Services LLC, as representative of the broad market of U.S. industry. For additional information about the Dow Jones Industrial Average<sup>SM</sup>, see the information set forth under “Dow Jones Industrial Average<sup>SM</sup>” in the accompanying index supplement.

Information as of market close on February 11, 2019:

<b>Bloomberg Ticker Symbol:</b>	INDU
<b>Current Index Value:</b>	25,053.11
<b>52 Weeks Ago:</b>	24,601.27
<b>52 Week High (on 10/3/2018):</b>	26,828.39
<b>52 Week Low (on 12/24/2018):</b>	21,792.20

The following graph sets forth the daily closing values of the INDU Index for the period from January 1, 2014 through February 11, 2019. The related table sets forth the published high and low closing values, as well as end-of-quarter closing values, of the INDU Index for each quarter in the same period. The closing value of the INDU Index on February 11, 2019 was 25,053.11. We obtained the information in the table and graph below from Bloomberg Financial Markets, without independent verification. The INDU Index has at times experienced periods of high volatility, and you should not take the historical values of the INDU Index as an indication of its future performance.
