Portfolio Review

The Fund has undergone a notable transformation in January, as we started the year 2003 by streamlining our portfolio with enhanced investment concentration. By focusing our hedges in selected investment sectors, we believe the Fund should have better performance going forward than it has in the past. In January, the Fund returned 8.65% in U.S. dollar terms, compared to the TAIEX's return of 12.94%. The difference was unsatisfactory compared to the Fund's previous track records, but we are still the best performing fund among our peers for the last three months.

In February, a principal uncertainty in the market is the pending issue of Iraq. Although the market should have factored the potential impact of a war into fundamentals, the overhang of such uncertainties may continue to discourage investors. Weak market sentiments have already led to a large correction in non-technology sectors. While further deterioration in sentiment is likely, we believe the downside risks are quite limited. We are still overweight in non-technology sectors, which should consolidate after recent corrections. On the other hand, we will increase the financial sector weighting to cope with the increasing risk of geopolitical uncertainties. Our longer-term investment view is still positive, as we believe non-technology sectors should continue to benefit from rising demand in China. The technology sector, in addition, should finally find its ground in the second quarter and revive from its multi-year downward trend. As the economy recovers, the financial sector is also likely to witness a stronger performance.

Core & Active Portfolio Sector Allocation

Performance Chart

* By regarding the active portion as an enhancer to the Fund's performance, we found that it might be misleading to directly compare the active portion of the Fund to the benchmark of the Fund. Moreover, our concentration strategy effectively increases the volatility of the action portion of the Fund. Thus, we believe it should be more appropriate to examine the Fund's performance by looking at the Fund as a whole. Starting from January, we will provide only one performance comparison in our review report to avoid any confusion that might arise.

Taiwan's Macro Economics Review

Source: DATASTREAM

Taiwan's exports growth should pick up in January, as U.S. inventory trends have remained positive for Taiwan's exports. However, as we pointed out last month, the sustainability of a recovery is still in doubt, especially when a war is on the horizon. Conservatism on the part of consumers as well as businesses could continue to dampen demand growth, prolonging the recovery process until confidence returns.
