FIDELITY D & D BANCORP, INC.

Notes to Consolidated Financial Statements

(Unaudited)

1. Nature of operations and critical accounting policies

Nature of operations

Fidelity Deposit and Discount Bank (the Bank) is a commercial bank chartered in the Commonwealth of Pennsylvania and a wholly-owned subsidiary of Fidelity D & D Bancorp, Inc. (the Company or collectively, the Company). Having commenced operations in 1903, the Bank is committed to provide superior customer service, while offering a full range of banking products and financial and trust services to both our consumer and commercial customers from our main office located in Dunmore and other branches located throughout Lackawanna and Luzerne counties.

Principles of consolidation

The accompanying unaudited consolidated financial statements of the Company and the Bank have been prepared in accordance with accounting principles generally accepted in the United States of America (GAAP) for interim financial information and with the instructions to this Form 10-Q and Rule 8-03 of Regulation S-X. Accordingly, they do not include all of the information and footnote disclosures required by GAAP for complete financial statements. In the opinion of management, all normal recurring adjustments necessary for a fair presentation of the financial condition and results of operations for the periods have been included. All significant inter-company balances and transactions have been eliminated in consolidation.

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reported periods. Actual results could differ from those estimates. For additional information and disclosures required under GAAP, refer to the Company's Annual Report on Form 10-K for the year ended December 31, 2011.

Management is responsible for the fairness, integrity and objectivity of the unaudited financial statements included in this report. Management prepared the unaudited financial statements in accordance with GAAP. In meeting its responsibility for the financial statements, management depends on the Company's accounting systems and related internal controls. These systems and controls are designed to provide reasonable but not absolute assurance that the financial records accurately reflect the transactions of the Company, the Company's assets are safeguarded and that the financial statements present fairly the financial condition and results of operations of the Company.

In the opinion of management, the consolidated balance sheets as of June 30, 2012 and December 31, 2011 and the related consolidated statements of income for the three- and six-month periods ended June 30, 2012 and 2011, and consolidated statements of comprehensive income, consolidated statements of changes in shareholders' equity and consolidated statements of cash flows for the six months ended June 30, 2012 and 2011 present fairly the financial condition and results of operations of the Company. All material adjustments required for a fair presentation have been made. These adjustments are of a normal recurring nature. Certain reclassifications have been made to the 2011 financial statements to conform to the 2012 presentation.

This Quarterly Report on Form 10-Q should be read in conjunction with the Company's audited financial statements for the year ended December 31, 2011, and the notes included therein, included within the Company's Annual Report filed on Form 10-K.

Critical accounting policies

The presentation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect many of the reported amounts and disclosures. Actual results could differ from these estimates.

A material estimate that is particularly susceptible to significant change relates to the determination of the allowance for loan losses. Management believes that the allowance for loan losses at June 30, 2012 is adequate and reasonable. Given the subjective nature of identifying and valuing loan losses, it is likely that well-informed individuals could make different assumptions and could, therefore, calculate a materially different allowance value. While management uses available information to recognize losses on loans, changes in economic conditions may necessitate revisions in the future. In addition, various regulatory agencies, as an integral part of their examination process, periodically review the Company's allowance for loan losses. Such agencies may require the Company to recognize adjustments to the allowance based on their judgment of information available to them at the time of their examination.

Another material estimate is the calculation of fair values of the Company's investment securities. Except for the Company's investment in corporate bonds, consisting of pooled trust preferred securities, fair values of the other investment securities are determined by prices provided by a third-party vendor, who is a provider of financial market data, analytics and related services to financial institutions. For the pooled trust preferred securities, management is unable to obtain readily attainable and realistic pricing from market traders due to a lack of active market participants and therefore management has determined the market for these securities to be inactive. In order to determine the fair value of the pooled trust preferred securities, management relied on the use of an income valuation approach (present value technique) that maximizes the use of relevant observable inputs and minimizes the use of unobservable inputs, the results of which are more representative of fair value than the market approach valuation technique used for the other investment securities.

Based on experience, management is aware that estimated fair values of investment securities tend to vary among valuation services. Accordingly, when selling investment securities, price quotes may be obtained from more than one source. The majority of the Company's investment securities are classified as available-for-sale (AFS). AFS securities are carried at fair value on the consolidated balance sheets, with unrealized gains and losses, net of income tax, reported separately within shareholders' equity as a component of accumulated other comprehensive income (loss) (OCI).

The fair value of residential mortgage loans, classified as held-for-sale (HFS), is obtained from the Federal National Mortgage Association (FNMA) or the Federal Home Loan Bank (FHLB). Generally, the market to which the Company sells mortgages it originates for sale is restricted and price quotes from other sources are not typically obtained. On occasion, the Company may transfer loans from the loan portfolio to loans HFS. Under these rare circumstances, pricing may be obtained from other entities and the loans are transferred at the lower of cost or market value and simultaneously sold. As of December 31, 2011, loans classified as HFS consisted of residential mortgages. There were no loans classified as HFS as of June 30, 2012.

For purposes of the consolidated statements of cash flows, cash and cash equivalents includes cash on hand, amounts due from banks and interest-bearing deposits with financial institutions. For the six months ended June 30, 2012 and 2011, the Company paid interest of \$1.8 million and \$2.7 million, respectively. The Company was required to pay income taxes of \$1.2 million and \$1.0 million during the six months of 2012 and 2011, respectively. Transfers from loans to foreclosed assets held-for-sale amounted to \$1.2 million during the six months ended June 30, 2012. There were no transfers from loans to foreclosed assets held-for-sale during the six months ended June 30, 2011. During the same respective periods, transfers from loans to loans HFS amounted to \$2.0 million and \$3.3 million. Expenditures for construction in process, a component of other assets in the consolidated balance sheets, are included in acquisition of bank premises and equipment.

2. New Accounting Pronouncements

In 2011, the Financial Accounting Standards Board (FASB) issued, and in 2012 the Company adopted, an accounting update related to Fair Value Measurement: Amendments to Achieve Common Fair Value Measurement and Disclosure Requirements in U.S. GAAP and IFRSs. This update amends existing Fair Value Measurements, to bring U.S. GAAP for fair value measurements in line with International Accounting Standards. The update clarifies existing guidance for items such as: the application of the highest and best use concept to non-financial assets and liabilities; the application of fair value measurement to financial instruments classified in a reporting entity's stockholder's equity; and disclosure requirements regarding quantitative information about unobservable inputs used in the fair value measurements of level 3 assets. The guidance also creates an exception to existing guidance for entities which carry financial instruments within a portfolio or group, under which the entity is now permitted to base the price used for fair valuation upon a price that would be received to sell the net asset position or transfer a net liability position in an orderly transaction. The guidance also allows for the application of premiums and discounts in a fair value measurement if the financial instrument is categorized in level 2 or 3 of the fair value hierarchy. It also contains new disclosure requirements regarding fair value amounts categorized as level 3 in the fair value hierarchy such as: disclosure of the valuation process used; effects of and relationships between unobservable inputs; usage of non-financial assets for purposes other than their highest and best use when that is the basis of the disclosed fair value; and categorization by level of items disclosed at fair value, but not measured at fair value for financial statement purposes. For public entities, this update is effective for interim and annual periods beginning after December 15, 2011. The adoption of the new accounting guidance did not have an impact on the Company's consolidated financial statements.

In June, 2011, the FASB issued an accounting update related to, Presentation of Comprehensive Income. The provisions of this update amend the accounting topic to facilitate the continued alignment of U.S. GAAP with International Accounting Standards. The update prohibits the presentation of the components of comprehensive income in the statement of stockholder's equity. Reporting entities are allowed to present either: a statement of comprehensive income, which reports both net income and other comprehensive income; or separate, but consecutive, statements of net income and other comprehensive income. Under previous GAAP, all three presentations were acceptable. Regardless of the presentation selected, the reporting entity is required to present all reclassifications between other comprehensive and net income on the face of the new statement or statements. For public entities, the provisions of this update are effective for fiscal years and interim periods beginning after December 31, 2011. The adoption of this accounting update did not have an impact on the Company's consolidated financial statements.

3. Investment securities

The amortized cost and fair value of investment securities at June 30, 2012 and December 31, 2011 are summarized as follows:

(dollars in thousands)	Amortized cost	Gross unrealized gains	Gross unrealized losses	Fair value

(dollars in thousands)	Amortized cost	Fair value
Held-to-maturity securities:		
MBS - GSE residential	\$ 338	\$377
Available-for-sale securities:		
Debt securities:		
Due in one year or less	\$4,122	\$4,127
Due after one year through five years	20,135	20,215
Due after five years through ten years	3,548	3,740
Due after ten years	31,758	29,169
Total debt securities	59,563	57,251
MBS - GSE residential	51,125	52,775
Total available-for-sale debt securities	\$ 110,688	\$ 110,026

Expected maturities will differ from contractual maturities because issuers and borrowers may have the right to call or repay obligations with or without call or prepayment penalty. Federal agency and municipal securities are included based on their original stated maturity. Mortgage-backed securities, which are based on weighted-average lives and subject to monthly principal pay-downs, are listed in total.

The following tables present the fair value and gross unrealized losses of investment securities aggregated by investment type, the length of time and the number of securities that have been in a continuous unrealized loss position as of June 30, 2012 and December 31, 2011:

(dollars in thousands)	Less than 12 months		More than 12 months		Total

Most of the securities in the investment portfolio have fixed rates or have predetermined scheduled rate changes, and many have call features that allow the issuer to call the security at par before its stated maturity, without penalty. Management believes the cause of the unrealized losses is related to changes in interest rates, instability in the capital markets or the limited trading activity due to illiquid conditions in the debt market and is not directly related to credit quality.

Management conducts a formal review of investment securities on a quarterly basis for the presence of other-than-temporary impairment (OTTI). The accounting guidance related to OTTI requires the Company to assess whether OTTI is present when the fair value of a debt security is less than its amortized cost at the balance sheet date. Under these circumstances, OTTI is considered to have occurred if: (1) the entity has intent to sell the security; (2) more likely than not the entity will be required to sell the security before recovery of its amortized cost basis; or (3) the present value of expected cash flows is not sufficient to recover the entire amortized cost.

The accounting guidance requires that credit-related OTTI be recognized in earnings while non-credit-related OTTI on securities not expected to be sold be recognized in other comprehensive income (loss) (OCI). Non-credit-related OTTI is based on other factors affecting market conditions, including illiquidity. Presentation of OTTI is made in the consolidated statements of income on a gross basis with an offset for the amount of non-credit-related OTTI recognized in OCI.

The Company's OTTI evaluation process also follows the guidance set forth in topics related to debt and equity securities. The guidance set forth in these pronouncements require the Company to take into consideration current market conditions, fair value in relationship to cost, extent and nature of changes in fair value, issuer rating changes and trends, volatility of earnings, current analysts' evaluations, all available information relevant to the collectability of debt securities, the ability and intent to hold investments until a recovery of fair value which may be maturity and other factors when evaluating for the existence of OTTI. The guidance requires that OTTI be recognized as a realized loss through earnings when there has been an adverse change in the holder's expected cash flows such that the full amount (principal and interest) will probably not be received. This requirement is consistent with the impairment model in the guidance for accounting for debt and equity securities.

For all security types discussed below, as of June 30, 2012, the Company applied the criteria provided in the recognition and presentation guidance related to OTTI. That is, management has no intent to sell the securities and no conditions were identified by management that more likely than not would require the Company to sell the securities before recovery of their amortized cost basis. The results indicated there was no presence of OTTI for the Company's portfolios of Agency – Government Sponsored Enterprise (GSE), Mortgage-backed securities (MBS) – GSE residential and Obligations of states and political subdivisions.

Agency - GSE and MBS - GSE residential

Agency – GSE and MBS – GSE residential securities consist of short- and medium-term notes issued by Federal Home Loan Mortgage Corporation (FHLMC), Federal National Mortgage Association (FNMA), Federal Home Loan Bank (FHLB), Federal Farm Credit Bank (FFCB) and Government National Mortgage Association (GNMA). These securities have interest rates that are largely fixed-rate issues, have varying short- to mid-term maturity dates and have contractual cash flows guaranteed by the U.S. government or agencies of the U.S. government.

Obligations of states and political subdivisions

The municipal securities are bank qualified or bank eligible, general obligation and revenue bonds rated as investment grade by various credit rating agencies and have fixed rates of interest with mid- to long-term maturities. Fair values of these securities are highly driven by interest rates. Management performs ongoing credit quality reviews on these issues.

In the above security types, the change in fair value is attributable to changes in interest rates and those instruments with unrealized losses were not caused by deterioration of credit quality. Accordingly, as of June 30, 2012, recognition of OTTI on these securities was unnecessary.

Pooled trust preferred securities

A Pooled Trust Preferred Collateralized Debt Obligation (CDO) is a type of investment security collateralized by trust preferred securities (TPS) issued by banks, insurance companies and real estate investment trusts. The primary collateral type is a TPS issued by a bank. A TPS is a hybrid security that consists of both debt and equity characteristics which includes the ability of the issuer to voluntarily defer interest payments for up to 20 consecutive quarters. A TPS is considered a junior security in the capital structure of the issuer.

There are various investment classes or tranches issued by the CDO. The most senior tranche has the lowest yield but the most protection from credit losses. Conversely, the most junior tranche has the highest yield and the most risk of credit loss. Junior tranches are subordinate to senior tranches and losses are generally allocated from the lowest tranche with the equity component holding the most risk of credit loss and then subordinate tranches in reverse order up to the most senior tranche. The allocation of losses is defined in the indenture when the CDO was formed.

Unrealized losses in the pooled trust preferred securities (PreTSLs) are caused mainly by the following factors: (1) collateral deterioration due to bank failures and credit concerns across the banking sector; (2) widening of credit spreads and (3) illiquidity in the market. The Company's review of its portfolio of pooled trust preferred securities determined that in 2012, credit-related OTTI be recorded on two holdings, both of which are contained in the Company's AFS securities portfolio, from credit quality downgrades on the underlying collateral, including the collateral of four banks deferring interest payments within these two securities and one bank fully redeeming which removes all future earnings cash flow.

The following table summarizes the amount of OTTI recognized in earnings, by security during the periods indicated:

(dollars in thousands)	Three months ended		Six months ended,	
	June 30, 2012	2011	June 30, 2012	2011
Pooled trust preferred securities:				
PreTSL IX, B1, B3	\$-	\$ -	\$18	\$ -
PreTSL XVIII, C	31	-	118	-
PreTSL XXIV, B1	-	-	-	75
Total	\$31	\$ -	\$136	\$ 75

The following is a tabular roll-forward of the cumulative amount of credit-related OTTI recognized in earnings:

(dollars in thousands)	Six months ended	
	HTM	Total
Beginning balance of credit-related OTTI	\$- \$(15,280)	\$(15,280)
Additions for credit-related OTTI not previously recognized	- -	-
Additional credit-related OTTI previously recognized when there is no intent to sell before recovery of amortized cost basis	- (136)	(136)
Ending balance of credit-related OTTI	\$- \$(15,416)	\$(15,416)

To determine credit-related OTTI, the Company analyzes the collateral of each individual tranche within each of the 13 individual pools in the Company's portfolio of pooled trust preferred securities (PreTSLs). The Company engaged a third party structured finance firm to: review the underlying collateral of each PreTSL; research trustee reports to update relevant data and credit ratings of the underlying collateral; project default rates and cash flows of the collateral and simulate 10,000 Monte Carlo time-to-default scenarios, performed quarterly to arrive at the single best estimate of future cash flow for each tranche.

The sub-topics of the Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) 320 provide the scope, steps and accounting guidance for impairment: 1) determine whether an investment is impaired; 2) evaluate whether impairment is other-than-temporary; then 3) recognition of OTTI. The guidance in ASC 320 retains and emphasizes the objective of OTTI assessment and the related disclosure requirements by aligning the OTTI methodology for certain securitizations. ASC 325 provides a scope exception for investments that were considered of high credit quality (i.e. rated "AA" or higher) at the time of acquisition. The application of the guidance contained in

ASC 320 is used for two investments considered of high credit quality and ASC 325 is used for the remaining eleven securities. The quarterly evaluations indicated there was a significant adverse change in cash flows in two of the securities, thereby signifying the likelihood of the Company not being able to recover its principal. As a result, \$0.1 million of credit related OTTI was recorded during the six months ended June 30, 2012.

The guidance prescribed in ASC 320 is used for investments that, upon purchase, were rated of high credit quality, "AA" or higher, by a nationally recognized statistical rating organization. The Company has two PreTSLs (XXIV and XXVII) that were of high credit quality, "AA" rated, upon acquisition. The PreTSL XXVII evaluation proved a high probability that the Company will be able to collect all amounts due, both principal and interest, by maturity and thus, determined the impairment is temporary. PreTSL XXIV was evaluated under ASC 320 to determine if the Company expects to recover the remaining amortized cost basis and if OTTI is deemed to have occurred. An adverse change or short-fall in the expected cash flows compared to the amortized cost would be recorded as credit-related OTTI. To assess the likelihood of recoverability, the present value of the best estimate of future cash flows is compared to the amortized cost. In this situation, the discount rate used was the interest rate implicit in the security at the date of acquisition. The application of the guidance on this security did not result in an adverse change in cash flows when compared quarterly to the last measurement date of March 31, 2012 and therefore, no credit related OTTI was recorded in the first half of 2012.

The remaining eleven PreTSLs were rated "A" by a nationally recognized statistical rating organization at the date of acquisition and as such are considered beneficial interests of securitized financial assets. For these securities, the Company applies the guidance of ASC 325. Under this and other relevant guidance, if the fair value is below amortized cost and the present value of the best estimate of future cash flows declines significantly, evidencing a probable material adverse change in cash flows since the last measurement date, credit-related OTTI is deemed to exist and written down to the determined present value through a charge to current earnings. The discount rate used under ASC 325 is the yield to accrete beneficial interest, which is representative of the resulting interest from the total gross estimated future cash flows less the current amortized cost. In applying this guidance to the remaining securities, PreTSLs IX and XVIII measured an adverse change in cash flows when compared to the last estimate and credit related OTTI of \$18,000 and \$118,000, respectively, was recorded in the first half of 2012.

The following table is the composition of the Company's non-accrual PreTSL securities as of the period indicated:

(dollars in thousands)		June 30, 2012		December 31, 2011	
Deal	Class	Book value	Fair value	Book value	Fair value
Pre TSL V	Mezzanine	\$-	\$25	\$-	\$25
Pre TSL VII	Mezzanine	-	79	-	79
Pre TSL IX	B-1,B-3	1,547	489	1,605	529
Pre TSL XI	B-3	1,112	303	1,119	357
Pre TSL XV	B-1	-	24	-	20
Pre TSL XVIII	C	167	-	285	5
Pre TSL XIX	C	316	-	316	8
Pre TSL XXIV	B-1	407	15	407	15
		\$3,549	\$935	\$3,732	\$1,038

The securities included in the above table, have experienced impairment of principal, and interest was "paid-in-kind". When these two conditions exist, the security is placed on non-accrual status. Quarterly, each of the other PreTSL issues is evaluated for the presence of these two conditions and if necessary placed on non-accrual status.

The following table provides additional information with respect to the Company's pooled trust preferred securities as of June 30, 2012:

(dollars in thousands)						Current		Actual		Excess Effective

Pre TSL XXVII	B	2,446	266	(2,180)	Ca / CC	42 / 7	91,800	28.1	None	N/A	23.8
		\$6,407	\$1,601	\$(4,806)							

(1) All ratings have been updated through June 30, 2012.

(2) Excess subordination represents the excess (if any) of the amount of performing collateral over the given class of bonds.

Effective subordination represents the estimated percentage of the performing collateral that would need to defer or (3) default at the next payment in order to trigger a loss of principal or interest. This differs from excess subordination in that it considers the effect of excess interest earned on the performing collateral.

For a further discussion on the fair value determination of the Company's investment in PreTSLs and other financial instruments, see Note 7, "Fair value measurements".

4. Loans

The classifications of loans at June 30, 2012 and December 31, 2011 are summarized as follows:

(dollars in thousands)	June 30, 2012	December 31, 2011
Commercial and industrial	\$ 68,733	\$ 68,372
Commercial real estate:		
Non-owner occupied	80,611	79,475
Owner occupied	75,363	76,611
Construction	12,021	9,387
Consumer:		
Home equity installment	34,339	36,390
Home equity line of credit	32,670	32,486
Auto	16,609	13,539
Other	5,760	5,833
Residential:		
Real estate	95,646	80,091
Construction	4,366	4,110
Total	426,118	406,294
Less:		
Allowance for loan losses	(8,151)	(8,108)
Loans, net	\$ 417,967	\$ 398,186

Net deferred loan costs of \$0.9 million and \$0.8 million have been added to the carrying values of loans at June 30, 2012 and December 31, 2011, respectively.

The Company services real estate loans for investors in the secondary mortgage market which are not included in the accompanying consolidated balance sheets. The approximate amount of mortgages serviced amounted to \$198.5 million as of June 30, 2012 and \$193.5 million as of December 31, 2011.

The Company utilizes an external independent loan review firm that reviews and validates the credit risk program on at least an annual basis. Results of these reviews are presented to management and the Board of Directors. The loan review process complements and reinforces the risk identification and assessment decisions made by lenders and

credit personnel, as well as the Company's policies and procedures.

Non-accrual loans

The decision to place loans on non-accrual status is made on an individual basis after considering factors pertaining to each specific loan. Commercial and industrial and commercial real estate loans are placed on non-accrual status when management has determined that payment of all contractual principal and interest is in doubt or the loan is past due 90 days or more as to principal and interest, unless well-secured and in the process of collection. Consumer loans secured by real estate and residential mortgage loans are placed on non-accrual status at 120 days past due as to principal and interest and unsecured consumer loans are charged off when the loan is 90 days or more past due as to principal and interest.

- 15 -

Non-accrual loans, segregated by class, at June 30, 2012 and December 31, 2011, were as follows:

(dollars in thousands)	June 30, 2012	December 31, 2011
Commercial and industrial	\$ 273	\$ 458
Commercial real estate:		
Non-owner occupied	2,357	2,406
Owner occupied	5,817	6,288
Construction	1,138	656
Consumer:		
Home equity installment	835	1,017
Home equity line of credit	435	730
Auto	-	-
Other	20	-
Residential:		
Real estate	2,541	2,329
Construction	70	78
Total	\$ 13,486	\$ 13,962

Troubled Debt Restructuring

A modification of a loan constitutes a troubled debt restructuring (TDR) when a borrower is experiencing financial difficulty and the modification constitutes a concession. The Company offers various types of concessions when modifying a loan, however, forgiveness of principal is rarely granted. Commercial and industrial loans modified in a TDR often involve temporary interest-only payments, term extensions, and converting revolving credit lines to term loans. Additional collateral, a co-borrower, or a guarantor is often requested. Commercial real estate and construction loans modified in a TDR often involve reducing the interest rate for the remaining term of the loan, extending the maturity date at an interest rate lower than the current market rate for new debt with similar risk, or substituting or adding a new borrower or guarantor. Construction loans modified in a TDR may also involve extending the interest-only payment period. Residential mortgage loans modified in a TDR are primarily comprised of loans where monthly payments are lowered to accommodate the borrowers' financial needs for an extended period of time. After the lowered monthly payment period ends, the borrower would revert back to paying principal and interest per the original terms with the maturity date adjusted accordingly. Home equity modifications and automobile loan modifications are typically not made and therefore standard terms do not exist for loans of this type.

Loans modified in a TDR may or may not be placed in non-accrual status. As of June 30, 2012, total TDRs amounted to \$6.4 million of which \$1.1 million were on non-accrual status. As of December 31, 2011, total TDRs amounted to

\$6.7 million of which \$1.4 million were on non-accrual status. Partial charge-offs may be taken against the outstanding loan balance, but, only in rare instances. As a result, loans modified in a TDR for the Company may have the financial effect of increasing the specific allowance for loan losses associated with the loan. The Company considers all TDRs to be impaired loans. An allowance for impaired loans that have been modified in a TDR is measured based on the present value of expected future cash flows discounted at the loan's effective interest rate or the loan's observable market price. If the loan is collateral dependent, the estimated fair value of the collateral, less any selling costs, is used to establish the allowance. Management exercises significant judgment in developing these estimates.

There were no loans modified in a TDR during the three and six months ended June 30, 2012. The following presents by class, loans modified as TDRs during the twelve months ended June 30, 2012 that subsequently defaulted (i.e., 90 days or more past due following a modification) during the three- and six-months ended June 30, 2012:

Loans modified as a TDR within the previous twelve months that subsequently defaulted during the:

(dollars in thousands)	Three months ended June 30, 2012		Six months ended June 30, 2012	
	Number of contracts	Recorded investment	Number of contracts	Recorded investment
Commercial real estate - owner occupied	-	\$ -	1	\$ 1,118

In the above table, the period end balance is inclusive of all partial pay downs and charge-offs since the modification date.

The \$1.1 million commercial real estate loan TDR that subsequently defaulted had been modified to lower payments. The Company has been applying all payments during this time to principal. An updated appraisal was obtained on the collateral during the first quarter of 2012 which necessitated an increase in the reserve for loan losses on this loan. The borrower has recently resumed making payments under a new agreement.

Loans modified in a TDR are closely monitored for delinquency as an early indicator of possible future default. If loans modified in a TDR subsequently default, the Company evaluates the loan for possible further impairment. The allowance may be increased, adjustments may be made in the allocation of the allowance or partial charge offs may be taken to further write-down the carrying value of the loan.

Past due loans

Loans are considered past due when the contractual principal and/or interest is not received by the due date. An aging analysis of past due loans, segregated by class of loans, as of the period indicated is as follows (dollars in thousands):

June 30, 2012	Past due			Total past due	Current	Total loans receivables	Recorded investment past due ≥ 90 days and accruing
	30 - 59 Days past due	60 - 89 Days past due	90 days or more *				
Commercial and industrial	\$ 93	\$ 295	\$ 278	\$666	\$68,067	\$ 68,733	\$ 5

Total	\$ 3,211	\$ 1,147	\$ 14,227	\$ 18,585	\$ 387,709	\$ 406,294	\$ 265

* Includes \$14.0 million of non-accrual loans.

Impaired loans

A loan is considered impaired when, based on current information and events; it is probable that the Company will be unable to collect the scheduled payments in accordance with the contractual terms of the loan. Factors considered in determining impairment include payment status, collateral value and the probability of collecting payments when due. The significance of payment delays and/or shortfalls is determined on a case-by-case basis. All circumstances surrounding the loan are taken into account. Such factors include the length of the delinquency, the underlying reasons and the borrower's prior payment record. Impairment is measured on these loans on a loan-by-loan basis. Impaired loans include non-accrual loans and other loans deemed to be impaired based on the aforementioned factors. At June 30, 2012, impaired loans consisted of TDRs totaling \$5.3 million in addition to the \$13.5 million of non-accrual loans. At December 31, 2011, impaired loans consisted of TDRs totaling \$5.3 million in addition to the \$14.0 million of non-accrual loans. Payments received on non-accrual loans are recognized on a cash basis. Payments are first applied against the outstanding principal balance, then to the recovery of any charged-off amounts. Any excess is treated as a recovery of interest income.

Impaired loans, segregated by class, as of the period indicated are detailed below:

(dollars in thousands)	Unpaid principal balance	Recorded investment with allowance	Recorded investment with no allowance	Total recorded investment	Related allowance	Average recorded investment	Interest income recognized	Cash basis interest income recognized

Credit Quality Indicators

Commercial and industrial and commercial real estate

The Company utilizes a loan grading system and assigns a credit risk grade to its loans in the commercial and industrial and commercial real estate portfolios. The grading system provides a means to measure portfolio quality and aids in the monitoring of the credit quality of the overall loan portfolio. The credit risk grades are arrived at using a risk rating matrix to assign a grade to each of the loans in the commercial and industrial and commercial real estate portfolios.

The following is a description of each risk rating category the Company uses to classify each of its commercial and industrial and commercial real estate loans:

Pass

Loans in this category have an acceptable level of risk and are graded in range of one to five. Secured loans generally have good collateral coverage. Current financial statements reflect acceptable balance sheet ratios, sales and earnings trends. Management is considered to be good, and there is some depth existing. Payment experience on the loans has been good with minor or no delinquency experience. Loans with a grade of one are of the highest quality in the range. Those graded five are of marginally acceptable quality.

Special Mention

Loans in this category are graded a six and may be protected but are potentially weak. They constitute a credit risk to the Company, but have not yet reached the point of adverse classification. Some of the following conditions may exist: little or no collateral coverage; lack of current financial information; delinquency problems; highly leveraged; available financial information reflects poor balance sheet ratios and profit and loss statements reflect uncertain trends; and document exceptions. Loans in this category should not remain on the list for an inordinate period of time (no more than one year) and then the loan should be passed or classified appropriately. Cash flow may not be sufficient to support total debt service requirements.

Substandard

Loans in this category are graded a seven and have a well-defined weakness which may jeopardize the ultimate collectability of the debt. The collateral pledged may be lacking in quality or quantity. Financial statements may indicate insufficient cash flow to service the debt; and/or do not reflect a sound net worth. The payment history indicates chronic delinquency problems. Management is considered to be weak. There is a distinct possibility that the Company may sustain a loss. All loans on non-accrual are rated substandard. Loans 90+ days past due unless otherwise fully supported should be classified substandard. Also, borrowers that are bankrupt are substandard.

Doubtful

Loans in this category are graded an eight and have a better than 50% possibility of the Company sustaining a loss, but the loss cannot be determined because of specific reasonable factors which may strengthen credit in the near-term. Many of the weaknesses present in a substandard loan exist. Liquidation of collateral, if any, is likely. Any loan graded lower than an eight is considered to be uncollectible and charged-off.

Consumer and Residential

The consumer and residential loan segments are regarded as homogeneous loan pools and as such are not risk rated. For these portfolios, the Company utilizes payment activity, history and recency of payment. Non-performing loans are considered to be loans past due 90 days or more and accruing and non-accrual loans. All loans not classified as non-performing are considered performing.

The following table presents loans, segregated by class, categorized into the appropriate credit quality indicator category as of the period indicated:

Allowance for loan losses

Management continually evaluates the credit quality of the Company's loan portfolio and performs a formal review of the adequacy of the allowance for loan losses (the allowance) on a quarterly basis. The allowance reflects management's best estimate of the amount of credit losses in the loan portfolio. Management's judgment is based on the evaluation of individual loans, past experience, the assessment of current economic conditions and other relevant factors including the amounts and timing of cash flows expected to be received on impaired loans. Those estimates may be susceptible to significant change. Loan losses are charged directly against the allowance when loans are deemed to be uncollectible. Recoveries from previously charged-off loans are added to the allowance when received.

- 19 -

Management applies two primary components during the loan review process to determine proper allowance levels. The two components are a specific loan loss allocation for loans that are deemed impaired and a general loan loss allocation for those loans not specifically allocated. The methodology to analyze the adequacy of the allowance for loan losses is as follows:

- § identification of specific impaired loans by loan category;
- § specific loans that are not impaired, but have an identified potential for loss;
 - § calculation of specific allowances where required for the impaired loans based on collateral and other objective and quantifiable evidence;
- § determination of loans with similar credit characteristics within each class of the loan portfolio segment and eliminating the impaired loans;
- § application of historical loss percentages (two-year average) to pools to determine the allowance allocation;
- § application of qualitative factor adjustment percentages to historical losses for trends or changes in the loan portfolio. Qualitative factor adjustments include:
 - o levels of and trends in delinquencies and non-accrual loans;
 - o levels of and trends in charge-offs and recoveries;
 - o trends in volume and terms of loans;
 - o changes in risk selection and underwriting standards;
 - o changes in lending policies, procedures and practices;
 - o experience, ability and depth of lending management;
 - o national and local economic trends and conditions; and
 - o changes in credit concentrations.

Allocation of the allowance for different categories of loans is based on the methodology as explained above. A key element of the methodology to determine the allowance is the Company's credit risk evaluation process, which includes credit risk grading of individual commercial and industrial and commercial real estate loans. Commercial and industrial and commercial real estate loans are assigned credit risk grades based on the Company's assessment of conditions that affect the borrower's ability to meet its contractual obligations under the loan agreement. That process includes reviewing borrowers' current financial information, historical payment experience, credit documentation, public information and other information specific to each individual borrower. Upon review, the commercial loan credit risk grade is revised or reaffirmed as the case may be. The credit risk grades may be changed at any time management feels an upgrade or downgrade may be warranted. The credit risk grades for the commercial and industrial and commercial real estate loan portfolios are taken into account in the reserve methodology and loss factors are applied based upon the credit risk grades. The loss factors applied are based upon the Company's historical experience as well as what we believe to be best practices and common industry standards. Historical experience

reveals there is a direct correlation between the credit risk grades and loan charge-offs. The changes in allocations in the commercial and industrial and commercial real estate loan portfolio from period to period are based upon the credit risk grading system and from periodic reviews of the loan portfolio.

Each quarter, management performs an assessment of the allowance for loan losses. The Company's Special Assets Committee meets quarterly and the applicable lenders discuss each relationship under review and reach a consensus on the appropriate estimated loss amount based on current accounting guidance. The Special Assets Committee's focus is on ensuring the pertinent facts are considered and the reserve amounts pursuant to the accounting principles are reasonable. The assessment process includes the review of all loans on a non-accruing basis as well as a review of certain loans to which the lenders or the Company's Credit Administration function have assigned a criticized or classified risk rating. In 2012, the Company did not change its policy or methodology in calculating the allowance for loan losses from the policy or methodology used in 2011.

The Company's policy is to charge off unsecured consumer loans when they become 90 days or more past due as to principal and interest. In the other portfolio segments, amounts are charged off at the point in time when the Company deems the balance to be uncollectible.

Information related to the change in the allowance for loan losses and the Company's recorded investment in loans by portfolio segment as of the period indicated is as follows:

5. Earnings per share

Basic earnings per share (EPS) is computed by dividing income available to common shareholders by the weighted-average number of common stock outstanding for the period. Diluted EPS is computed in the same manner as basic EPS but reflects the potential dilution that could occur from the grant of stock-based compensation awards. As more fully described in Note 6, "Stock plans," the Company maintains two share-based compensation plans that may generate additional potentially dilutive common shares. For granted and unexercised stock options, dilution would occur if Company-issued stock options were exercised and converted into common stock. Since the average share market prices of the Company's common stock, during the three- and six-months ended June 30, 2012 and 2011, were below the strike prices of all unexercised outstanding options, there were no potentially dilutive shares outstanding in any of the reportable periods related to stock options. For restricted stock, dilution occurs based on the unvested

number of shares outstanding or 151 shares for the three and six months ended June 30, 2012.

In the computation of diluted EPS, the Company uses the treasury stock method to determine the dilutive effect of its granted but unexercised stock options and unvested restricted stock. Under the treasury stock method, the assumed proceeds received from shares issued, in a hypothetical stock option exercise or restricted stock grant, are assumed to be used to purchase treasury stock. Pursuant to the accounting guidance for earnings per share, proceeds include: proceeds from the exercise of outstanding stock options; compensation cost for future service that the Company has not yet recognized; and any “windfall” tax benefits that would be credited directly to shareholders’ equity when the grant generates a tax deduction (or a reduction in proceeds if there is a charge to equity).

- 22 -

The following table illustrates the data used in computing basic EPS and a reconciliation to derive at the components of diluted EPS for the periods indicated:

	Three months ended June 30,		Six months ended June 30,	
	2012	2011	2012	2011
(dollars in thousands except per share data)				
Basic EPS:				
Net income available to common shareholders	\$ 1,317	\$ 1,289	\$ 2,574	\$ 2,516
Weighted-average common shares outstanding	2,277,423	2,203,550	2,269,402	2,194,569
Basic EPS	\$ 0.57	\$ 0.59	\$ 1.13	\$ 1.15
Diluted EPS:				
Net income available to common shareholders	\$ 1,317	\$ 1,289	\$ 2,574	\$ 2,516
Weighted-average common shares outstanding	2,277,423	2,203,550	2,269,402	2,194,569
Potentially dilutive common shares	151	-	151	-
Weighted-average common and potentially dilutive shares outstanding	2,277,574	2,203,550	2,269,553	2,194,569
Diluted EPS	\$ 0.57	\$ 0.59	\$ 1.13	\$ 1.15

6. Stock plans

The Company has two stock-based compensation plans (the stock compensation plans) from which it can grant stock-based compensation awards, and applies the fair value method of accounting for stock-based compensation provided under the current accounting guidance. The guidelines require the cost of share-based payment transactions (including those with employees and non-employees) be recognized in the financial statements. The stock compensation plans were shareholder-approved and permit the grant of share-based compensation awards to its employees and directors. The Company believes that the stock-based compensation plans will advance the development, growth and financial condition of the Company by providing incentives through participation in the appreciation in the value of the common stock of the Company to secure, retain and motivate employees who may be responsible for the operation and for the management of the affairs of the Company and to secure, retain and motivate the members of the Company's board of directors, thereby aligning the interest of its employees and directors with the interest of its shareholders. In the stock compensation plans, employees and directors are eligible to be awarded stock-based compensation grants which can consist of stock options (qualified and non-qualified), stock appreciation rights (SARs) or restricted stock.

At the annual shareholders' meeting held on May 1, 2012, the shareholders of the Company approved and therefore the Company adopted the 2012 Omnibus Stock Incentive Plan and the 2012 Director Stock Incentive Plan (collectively,

the 2012 stock incentive plans). The 2012 stock incentive plans have replaced the 2000 Independent Directors Stock Option Plan and the 2000 Stock Incentive Plan (collectively, the 2000 stock incentive plans), both of which expired in 2011. Unless previously terminated by the Company's board of directors, the 2012 stock incentive plans shall terminate on, and no options shall be granted after the tenth anniversary – or in the year 2022. Previously issued and currently outstanding options under the 2000 stock incentive plans may be exercised pursuant to the terms of the stock option plans existing at the time of grant. However, the outstanding options under the 2000 stock incentive plans may be cancelled and replaced with grants under the new 2012 stock incentive plans.

For the 2012 Omnibus Stock Incentive Plan, the Company has reserved 500,000 shares of its no-par common stock for issuance under the plan. On June 5, 2012, the Company granted one share of restricted stock to each of its qualifying employees, or a total of 151 shares. The shares will vest one-year from date of grant and the Company has projected a forfeiture rate of 28%. On the date of grant, the value of the Company's common stock was \$21.50 per share and share-based compensation expense of \$2,300 was recognized. Typically, the Company recognizes the share-based compensation expense over the requisite service or vesting period, however due to immateriality the Company has chosen to recognize all of the expense in the current period. Share-based compensation expense is included as a component of salaries and employee benefits in the consolidated statements of income. There were no stock-based awards granted to employees under any of the Company's stock compensation plans in all of 2011.

For the 2012 Director Stock Incentive Plan, the Company has reserved 500,000 shares of its no-par common stock for issuance under the plan. For the three- and six-months ended June 30, 2012, no stock-based awards were granted to the Company's directors. In addition, there were no stock-based awards granted to directors under any of the Company's stock compensation plans in all of 2011.

In addition to the two stock option plans, the Company established the 2002 Employee Stock Purchase Plan (the ESPP) and reserved 110,000 shares of its un-issued capital stock for issuance. The plan was designed to promote broad-based employee ownership of the Company's stock and to motivate employees to improve job performance and enhance the financial results of the Company. Under the ESPP, employees use automatic payroll withholdings to purchase the Company's capital stock at a discounted price based on the fair market value of the capital stock as measured on either the commencement date or termination date. As of June 30, 2012, 25,700 shares have been issued under the ESPP. The ESPP is considered a compensatory plan and as such, is required to comply with the provisions of authoritative accounting guidance. The Company recognizes compensation expense on its ESPP on the date the shares are purchased which occurs during the Company's first calendar quarter. For the six months ended June 30, 2012 and 2011, compensation expense related to the ESPP approximated \$12,000 and \$24,000, respectively, and is included as a component of salaries and employee benefits in the consolidated statements of income.

7. Fair value measurements

The accounting guidelines establish a framework for measuring and disclosing information about fair value measurements. The guidelines of fair value reporting instituted a valuation hierarchy for disclosure of the inputs used to measure fair value. This hierarchy prioritizes the inputs into three broad levels as follows:

Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities;

Level 2 inputs are quoted prices for similar assets and liabilities in active markets; quoted prices for identical or similar assets or liabilities in markets that are not active; or inputs that are observable for the asset or liability, either directly or indirectly through market corroboration, for substantially the full term of the financial instrument;

Level 3 inputs are unobservable inputs based on the Company's own assumptions to measure assets and liabilities at fair value. Level 3 pricing for securities may also include unobservable inputs based upon broker-traded transactions.

A financial asset or liability's classification within the hierarchy is determined based on the lowest level input that is significant to the fair value measurement.

The Company uses fair value to measure certain assets and, if necessary, liabilities on a recurring basis when fair value is the primary measure for accounting. Thus, the Company uses fair value for AFS securities. Fair value is used on a non-recurring basis to measure certain assets when adjusting carrying values to market values, such as impaired

loans and other real estate owned.

The following table represents the carrying amount and estimated fair value of the Company's financial instruments as of the periods indicated:

(dollars in thousands)	June 30, 2012			Significant other observable inputs (Level 2)	Significant other unobservable inputs (Level 3)	December 31, 2011	
	Carrying amount	Estimated fair value	Quoted prices in active markets (Level 1)			Carrying amount	Estimated fair value

Short-term borrowings	8,106	8,106	8,106	-	-	9,507	9,507
Long-term debt	16,000	18,909	-	18,909	-	21,000	24,272
Accrued interest	232	232	232	-	-	293	293

The carrying value of short-term financial instruments, as listed above, approximates their fair value. These instruments generally have limited credit exposure, no stated or short-term maturities and carry interest rates that approximate market:

Cash and cash equivalents;

Non-interest bearing deposit accounts;

Savings, NOW and money market accounts;

Short-term borrowings and

Accrued interest

Securities: With the exception of pooled trust preferred securities, fair values on the other debt investment securities (level 2) are determined by prices provided by a third-party vendor, who is a provider of financial market data, analytics and related services to financial institutions. The fair values of pooled trust preferred securities are determined based on an income approach, present value technique.

FHLB stock: The Company considers the fair value of FHLB stock is equal to its carrying value, or cost since there is no market value available and investments in and transactions for the stock are restricted and limited to the FHLB and its member-banks.

Loans, net: The fair value of loans is estimated by the net present value of the future expected cash flows discounted at the current offering rates. Current offering rates consider, among other things, credit risk. The carrying value that fair value is compared to is net of the allowance for loan losses and since there is a significant judgment included in evaluating credit quality, loans are classified within Level 3 of the fair value hierarchy.

Loans held-for-sale: The fair value of loans held-for-sale is estimated using rates currently offered for similar loans and is typically obtained from the Federal National Mortgage Association (FNMA) or the Federal Home Loan Bank of Pittsburgh (FHLB).

Certificates of deposit: The fair values of certificates of deposit are based on discounted cash flows using rates which approximate market rates for deposits of similar maturities.

Long-term debt: Fair value is estimated using the rates currently offered for borrowings of similar terms and maturities.

The following tables illustrate the financial instruments measured at fair value on a recurring basis segregated by hierarchy fair value levels as of the period indicated:

Quoted prices in active markets	Significant other	Significant other
--	-------------------	-------------------

Equity securities in the AFS portfolio are measured at fair value using quoted market prices for identical assets and are classified within Level 1 of the valuation hierarchy. Other than the Company's investment in corporate bonds, consisting of pooled trust preferred securities, all other debt securities in the AFS portfolio are measured at fair value using market quotations provided by a third-party vendor, who is a provider of financial market data, analytics and related services to financial institutions. Assets classified as Level 2 use valuation techniques that are common to bond valuations. That is, in active markets whereby bonds of similar characteristics frequently trade, quotes for similar assets are obtained. For the six months ended June 30, 2012, there were no transfers to and from Level 1 and Level 2 fair value measurements for financial assets measured on a recurring basis.

The Company's pooled trust preferred securities include both observable and unobservable inputs to determine fair value and, therefore, are considered Level 3 inputs. The accounting pronouncement related to fair value measurement provides guidance on estimating fair value when the volume and level of activity for an asset or liability have significantly decreased in relation to normal market activity such as is the case with the Company's investment in pooled trust preferred securities. The requirements of fair value measurement also call for additional disclosures on fair value measurements.

The following table presents and summarizes quantitative information about assets measured at fair value on a recurring basis whereby the Company uses Level 3 inputs to determine fair value:

Quantitative information about Level 3 fair value measurements as of June 30, 2012:

(dollars in thousands)	Fair value	Valuation technique	Unobservable input	Input utilized
Available-for-sale securities:				
Pooled trust preferred securities	\$1,601	discounted cash flow	- structural behavior; - estimated probability of default - correlation analysis among issuers - loss given default rate - prepayment rate - recovery rate - credit adjusted cash flow discount rate	issuer specific 4.50% - 4.62% 50% - 30% 100% 0% 0% 0% - 54.4%

The Company owns 13 issues of \$22.3 million, original par value, pooled trust preferred securities. As of June 30, 2012, the amortized cost and fair values amounted to \$6.4 million and \$1.6 million, respectively. The market for these securities is inactive – no new issues since late 2007, financial institutions with less than \$10 billion in assets qualify for new issue Tier 1 capital treatment which further limits the already low possibility of a new issue coming to market, trading is sparse and consummated mostly by speculative hedge funds. Observable pricing market inputs such as broker models, S&P pricing based on interpolated available market activity and Bloomberg fair value models for corporate issues are available, however, such inputs to be used as indicators of fair value would require significant adjustments. Therefore, management has determined that a fair value modeled income approach (discounted cash flow) is more representative of fair value than the market approach. This technique strives to maximize the use of observable inputs and minimizes the use of unobservable inputs. The Company uses the Moody's Wall Street Analytics methodology of valuation and analysis of collateralized "TruPS", and their proprietary software to help analyze and value the Company's pooled trust preferred securities portfolio. The major unobservable input assumptions used in the cash flow analysis include:

Credit quality estimated using issuer specific probability of default;

Correlation analysis or the potential for the tendency of companies to default once other companies in the same industry default: 50% for same industry and 30% for across industries;

Loss given default or cash lost to investor. Assumed to be 100% with no recovery:

Cash flows were forecast for the underlying collateral and applied to each tranche to determine the resulting distribution among securities, capturing the credit risk element of the collateral, and to determine the estimated fundamental value of the security. No prepayments are assumed and the tranche coupon rate is used as the discount rate; and

Finally, the orderly liquid exit values (OLEV) are calculated for valuation purposes. The OLEV considers a new issuance spread as if the market was both liquid and active utilizing the current risk profile of the security and regression analysis across a large sample of tranches based on historical data. The discount rates determined on an overall basis ranged from 0% to 54% as of June 30, 2012 and applied to the fundamental cash flow value (as determined above) of the security to determine fair value.

The following table illustrates the changes in Level 3 financial instruments, consisting of the Company's investment in pooled trust preferred securities, measured at fair value on a recurring basis for the periods indicated:

(dollars in thousands)	As of and for the six months ended June 30,	
	2012	2011
Balance at beginning of period	\$ 1,466	\$ 1,453
Realized losses in earnings	(136)	(75)
Unrealized gains (losses) in OCI:		
Gains	410	206
Losses	(108)	(243)
Pay down / settlement	(47)	(28)
Interest paid in kind	14	6
Accretion	2	2
Balance at end of period	\$ 1,601	\$ 1,321

The following table illustrates the financial instruments measured at fair value on a non-recurring basis segregated by hierarchy fair value levels as of the periods indicated:

(dollars in thousands)	Total carrying value at June 30, 2012	Quoted prices in active markets (Level 1)	Significant other observable inputs (Level 2)	Significant other unobservable inputs (Level 3)
Impaired loans	\$8,601	\$-	\$-	\$8,601
Other real estate owned	1,800	-	-	1,800
Total	\$10,401	\$-	\$-	\$10,401

(dollars in thousands)	Total carrying value at December 31, 2011	Quoted prices in active markets (Level 1)	Significant other observable inputs (Level 2)	Significant other unobservable inputs (Level 3)
Impaired loans	\$10,102	\$-	\$-	\$10,102
Other real estate owned	902	-	-	902
Total	\$11,004	\$-	\$-	\$11,004

From time-to-time, the Company may be required to record at fair value financial instruments on a non-recurring basis, such as impaired loans and other real estate owned (ORE). These non-recurring fair value adjustments involve

the application of lower-of-cost-or-market accounting on write downs of individual assets.

The following describes valuation methodologies used for financial instruments measured at fair value on a non-recurring basis.

A loan is considered impaired when, based upon current information and events; it is probable that the Company will be unable to collect all scheduled payments in accordance with the contractual terms of the loan. Impaired loans that are collateral dependent are written down to fair value through the establishment of specific reserves, a component of the allowance for loan losses, and as such are carried at the lower of net recorded investment or the estimated fair value. Estimates of fair value of the collateral are determined based on a variety of information, including available valuations from certified appraisers for similar assets, present value of discounted cash flows and inputs that are estimated based on commonly used and generally accepted industry liquidation advance rates and estimates and assumptions developed by management. For other real estate owned fair value is generally determined through independent appraisals of the underlying properties which generally include various Level 3 inputs which are not identifiable. The appraisals may be adjusted by management for qualitative reasons and estimated liquidation expenses. Management's assumptions may include consideration of location and occupancy of the property and current economic conditions. At June 30, 2012 to account for these factors, adjustments to the appraisal values ranged from 0.0% to -54.5% (weighted average -24.7%). Valuation techniques for impaired loans are generally determined through independent appraisals of the underlying collateral which generally include various Level 3 inputs which are not identifiable. The appraisals may be adjusted by management for estimated liquidation expenses and qualitative factors such as economic conditions. If real estate is not the primary source of repayment, present value of discounted cash flows and estimates using generally accepted industry liquidation advance rates are utilized. The range of liquidation expenses and other appraisal adjustments of the impaired loans at June 30, 2012 was -15.0% to -32.2% (weighted-average -23.7%). Due to the multitude of assumptions, many of which are subjective in nature, and the varying inputs and techniques used by appraisers, the Company recognizes that valuations could differ across a wide spectrum of valuation techniques employed and accordingly, fair value estimates for impaired loans are classified as Level 3.

The fair value for ORE is estimated in the same manner as impaired loans and, as such, is also classified as Level 3. As these properties are actively marketed, the estimated fair values may be periodically adjusted through incremental subsequent write-downs to reflect decreases in estimated values resulting from sales price observations and the impact of changing economic and market conditions.

Management of the Company concluded that the inputs used to determine fair value of its non-recurring financial instruments, including valuations received from third party certified appraisers, industry standard liquidation rates and other subjective inputs from management, contain a number of assumptions that are unobservable in the marketplace.

Item 2: Management's Discussion and Analysis of Financial Condition and Results of Operations

The following is management's discussion and analysis of the significant changes in the consolidated financial condition of the Company as of June 30, 2012 compared to December 31, 2011 and a comparison of the results of operations for the three- and six-months ended June 30, 2012 and 2011. Current performance may not be indicative of future results. This discussion should be read in conjunction with the Company's 2011 Annual Report filed on Form 10-K.

Forward-looking statements

Certain of the matters discussed in this Quarterly Report on Form 10-Q may constitute forward-looking statements for purposes of the Securities Act of 1933, as amended, and the Securities Exchange Act of 1934, as amended, and as such may involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company to be materially different from future results, performance or achievements expressed or implied by such forward-looking statements. The words "expect," "anticipate," "intend," "plan," "believe," "estimate," and similar expressions are intended to identify such forward-looking statements.

The Company's actual results may differ materially from the results anticipated in these forward-looking statements due to a variety of factors, including, without limitation:

§ the effects of economic deterioration on current customers, specifically the effect of the economy on loan customers' ability to repay loans;

§ the costs and effects of litigation and of unexpected or adverse outcomes in such litigation;

§

the effect of new laws and regulations, specifically the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 and the regulations promulgated there under;

§ governmental monetary and fiscal policies, as well as legislative and regulatory changes;

§ the effect of changes in accounting policies and practices, as may be adopted by the regulatory agencies, as well as the Financial Accounting Standards Board and other accounting standard setters;

§ the risks of changes in interest rates on the level and composition of deposits, loan demand, and the values of loan collateral, securities and interest rate protection agreements, as well as interest rate risks;

§ the effects of competition from other commercial banks, thrifts, mortgage banking firms, consumer finance companies, credit unions, securities brokerage firms, insurance companies, money market and other mutual funds and other financial institutions operating in the Company's market area and elsewhere, including institutions operating locally, regionally, nationally and internationally, together with such competitors offering banking products and services by mail, telephone, computer and the internet;

§ technological changes;

§ acquisitions and integration of acquired businesses;

§ the failure of assumptions underlying the establishment of reserves for loan losses and estimations of values of collateral and various financial assets and liabilities;

§ volatilities in the securities markets;

§ deteriorating economic conditions;

§ disruption of credit and equity markets; and

§ acts of war or terrorism.

The Company cautions readers not to place undue reliance on forward-looking statements, which reflect analyses only as of the date of this document. The Company has no obligation to update any forward-looking statements to reflect events or circumstances occurring after the date of this document.

Readers should review the risk factors described in other documents that we file or furnish, from time to time, with the Securities and Exchange Commission, including Annual Reports to Shareholders, Annual Reports filed on Form 10-K and other current reports filed or furnished on Form 8-K.

General

The unemployment rate fell nationally to its lowest level in two years from 8.5% at December 31, 2011 to 8.2% at June 30, 2012. After jumping to 9.2% at the end of the first quarter of 2012, the Scranton-Wilkes-Barre Metropolitan Statistical Area (local) dropped to 8.7% at May 31, 2012, a slight increase from 8.5% at December 31, 2011. Although the local unemployment rate increased from 8.5% at December 31, 2011 to 8.7% at May 31, 2012, there was a drop of 0.8% compared to June 30, 2012. The Scranton Metropolitan housing and real estate markets remain soft with median home values relatively unchanged from both year-end 2011 and June 30, 2011. Sustaining high levels of unemployment and the prolonged softness in the local housing and real estate markets may negatively impact the performance and condition of the Company's loan portfolio. Though the condition of the local economy has had recent significant financial implications on the City of Scranton, the Company does not expect the City's difficulties to have a significant negative impact on the Company.

The Company's results of operations depend primarily on net interest income. Net interest income is the difference between interest income and interest expense. Interest income is generated from yields on interest-earning assets, which consist principally of loans and investment securities. Interest expense is incurred from rates paid on interest-bearing liabilities, which consist of deposits and borrowings. Net interest income is determined by the Company's interest rate spread (the difference between the yields earned on its interest-earning assets and the rates paid on its interest-bearing liabilities) and the relative amounts of interest-earning assets and interest-bearing liabilities. Interest rate spread is significantly impacted by: changes in interest rates and market yield curves and their related impact on cash flows; the composition and characteristics of interest-earning assets and interest-bearing liabilities; differences in the maturity and re-pricing characteristics of assets compared to the maturity and re-pricing characteristics of the liabilities that fund them and by the competition in the marketplace.

The Company's profitability is also affected by the level of its non-interest income and expenses and by the provisions for loan losses and income taxes. Non-interest income consists mostly of service charges on the Company's loan and deposit products, interchange fees, trust and asset management service fees, increases in the cash surrender value of the bank owned life insurance, net gains or losses from sales of loans, securities and foreclosed assets held-for-sale, the write-down to market value of foreclosed properties held-for-sale and from credit-related OTTI charges from investment securities. Non-interest expense consists of compensation and related employee benefit expenses, occupancy, equipment, data processing, advertising, marketing, FDIC insurance premiums, professional fees, loan collection and other real estate owned expenses, supplies and other operating overhead.

Due to the prolonged low interest rate environment, the Company continues to anticipate net interest margin to decline during 2012. In addition, non-interest income and expenses could be negated by the effect of the potential for increased credit costs and further credit-related OTTI charges.

Comparison of the results of operations

Three- and six-months ended June 30, 2012 and 2011

Overview

Net income for each of the second quarters of 2012 and 2011 was \$1.3 million or \$0.57 per diluted share in the 2012 quarter and \$0.59 in the 2011 quarter. For the six months ended June 30, 2012, net income was \$2.6 million, or \$1.13 per diluted share compared to \$2.5 million, or \$1.15 per diluted share, recorded for the six months ended June 30, 2011. In the quarter and six-month comparisons, net income improved marginally as higher non-interest income offset a decline in net interest income, an increase in the provision for loan losses and higher operating expenses. The decrease in earnings per share is due to an increase in the average number of shares outstanding in the second quarter and year-to-date periods ended June 30, 2012 compared to the same periods of 2011.

Return on average assets (ROA) and return on average shareholders' equity (ROE) were 0.87% and 9.47%, respectively, for the three months ended June 30, 2012 compared to 0.87% and 10.44%, respectively, for the three months ended June 30, 2011. For the six months ended June 30, 2012, ROA and ROE were 0.85% and 9.35%, respectively, compared to 0.86% and 10.43% for the same period in 2011. The lower ROE in both periods is attributable to an increase in average shareholders' equity which has been driven by higher retained earnings and a lower level of other comprehensive loss.

Net interest income and interest sensitive assets / liabilities

Net interest income decreased \$0.2 million, or 3%, in the second quarter of 2012 to \$5.1 million, from \$5.3 million recorded in the second quarter of 2011. The net interest rate spread decreased to 3.64% for the three months ended June 30, 2012 from 3.75% for the three months ended June 30, 2011. Similarly, during the same period, the net interest margin dropped to 3.81% from 4.01%. The declines in net interest income, spread and margin were due primarily to a more rapid decline in the yield on average interest-earning assets than the decline in the cost on average interest-bearing liabilities and an increase in lower yielding average interest-earning assets, thereby producing lower net interest income. Though total average interest-earning assets increased \$13.1 million in the second quarter of 2012 compared to the second quarter of 2011, the increase occurred in lower yielding investment and residential mortgage loan portfolios that only partially offset the decline in yield and volume of commercial lending activities. Total interest income decreased \$0.6 million, or 9%, from \$6.6 million for the quarter ended June 30, 2011 to \$6.0 million for the second quarter of 2012. The decrease in interest income was due to a decline in the average yields in all interest-earning asset portfolios, predominantly however, in the commercial loan portfolio where the yield declined 47 basis points. This decline in yield in conjunction with an \$18.8 million decrease in average interest-earning commercial balances, resulted in a decrease of \$0.6 million in commercial lending interest income. Interest expense for the three months ended June 30, 2012 was \$0.9 million, a decrease of \$0.4 million, or 35%, from \$1.3 million recorded during the three months ended June 30, 2011. The decrease in interest expense was primarily due to decreases in the average cost paid on interest-bearing deposits and a lower level of long-term debt. The cost of interest-bearing deposits, which declined 41 basis points during the second quarter of 2012 compared to the same quarter of 2011, was caused mostly by lower rates paid on CDs and savings accounts of 72 basis points and 32 basis points, respectively. The decrease in interest expense from borrowed funds was from the payoff of a \$5.0 million, 3.61% FHLB advance that was scheduled to mature in 2013.

Net interest income for the six months ended June 30, 2012 was \$10.3 million, a \$0.3 million decline from the \$10.6 million recorded during the six months ended June 30, 2011. In the six month comparison, interest rate spread and margin declined 16 basis points and 26 basis points, respectively. Like the quarter-to-quarter variance, the decreases in net interest income, spread and margin were due to yields on average interest-earning assets declining more rapidly than the decline in the cost on average interest-bearing liabilities. Similarly, average interest-earning assets increased \$21.9 million in the first half of 2012 compared to the first half of 2011. The growth was mostly from lower yielding investment and residential mortgage loan portfolios. As a result, lower net interest income was produced in the current year. Total interest income declined \$1.1 million, or 8%, from \$13.1 million for the six months ended June 30, 2011 to \$12.0 million for the six months ended 2012. The decrease in interest income was due to a decline in the average yields in all interest-earning asset portfolios. Akin to the quarterly comparison, the commercial loan portfolio earned 46 basis points less in the current year and when coupled with a \$20.7 million decrease in average interest-earning commercial loan balances, resulted in a decrease of \$1.1 million in interest income. Interest expense for the six months ended June 30, 2012 was \$1.8 million, a decrease of \$0.8 million, or 32%, from \$2.6 million for the six months ended June 30, 2011. The decrease in interest expense was primarily due to decreases in the average cost paid on interest-bearing liabilities and the aforementioned early pay down of long-term debt. The cost of interest-bearing deposits, which declined 41 basis points during the first half of 2012 compared to the 2011 first half, was caused mostly by lower rates paid on CDs and savings accounts of 70 basis points and 34 basis points, respectively.

The persistent and stubbornly low interest rate environment has, as predicted, caused yields from earning assets to further contract and will most likely continue to do so throughout 2012 and therefore will compress the Company's net interest margin. At 77 basis points, the Company's cost of interest-bearing liabilities for the quarter ended June 30, 2012 is 42 basis points lower than the 1.19% paid in the second quarter of 2011. Reducing deposit rates would help reduce interest expense, however, the rates currently paid on deposits are at all-time low levels with little room for additional downward adjustment. Maturing certificates of deposit with interest rates that exceed the Company's cost of funds will help lower interest expense, but the lower yields on existing, new and re-pricing interest earning-assets will continue to apply downward pressure on net interest margin. To help stabilize net interest income, in the first quarter, the Company paid off a \$5.0 million, 3.61% long-term FHLB advance scheduled to mature in 2013. A prepayment fee of \$0.2 million was incurred but the transaction will be accretive to net interest margin throughout 2012.

The Company's Asset Liability Management (ALM) team meets regularly to discuss among other things, interest rate risk and when deemed necessary adjusts interest rates on deposits and repurchase agreements to further combat the decline in interest income. The Company's marketing department, in concert with ALM, lending and deposit gatherers, continues to develop prudent strategies that will grow the loan portfolio and accumulate low-cost deposits in order contain the Company's interest rate margin to appropriate levels.

The tables that follow set forth a comparison of average balances and their corresponding fully tax-equivalent (FTE) interest income and expense and annualized tax-equivalent yield and cost for the periods indicated:

Edgar Filing: FIDELITY D & D BANCORP INC - Form 10-Q

Net interest income	\$10,713	\$10,978
Net interest spread	3.60 %	3.76 %
Net interest margin	3.77 %	4.03 %

In the preceding tables, interest income was adjusted to a tax-equivalent basis, using the corporate federal tax rate of 34%, to recognize the income from tax-exempt interest-earning assets as if the interest was taxable. This treatment allows a uniform comparison between yields on interest-earning assets. Loans include loans HFS and non-accrual loans but exclude the allowance for loan losses. Net deferred loan cost amortization of \$42.9 thousand and \$39.7 thousand for the second quarters of 2012 and 2011, respectively, and \$59.6 thousand and \$107.7 thousand for the second halves of 2012 and 2011, respectively, are included in interest income from loans. Securities include non-accrual securities. Average balances are based on amortized cost and do not reflect net unrealized gains or losses. Net interest margin is calculated by dividing net interest income by total average interest-earning assets.

Provision for loan losses

The provision for loan losses represents the necessary amount to charge against current earnings, the purpose of which is to increase the allowance for loan losses to a level that represents management's best estimate of known and inherent losses in the Company's loan portfolio. Loans determined to be uncollectible are charged off against the allowance for loan losses. The required amount of the provision for loan losses, based upon the adequate level of the allowance for loan losses, is subject to ongoing analysis of the loan portfolio. The Company's Special Assets Committee meets periodically to review problem loans. The committee is comprised of management, including the senior loan officer, the chief risk officer, loan officers, loan workout officers and collection personnel. The committee reports quarterly to the Credit Administration Committee of the Board of Directors.

Management continuously reviews the risks inherent in the loan portfolio. Specific factors used to evaluate the adequacy of the loan loss provision during the formal process include:

- specific loans that could have loss potential;
- levels of and trends in delinquencies and non-accrual loans;
- levels of and trends in charge-offs and recoveries;
- trends in volume and terms of loans;
- changes in risk selection and underwriting standards;
- changes in lending policies, procedures and practices;
- experience, ability and depth of lending management;
- national and local economic trends and conditions; and
- changes in credit concentrations.

The provision for loan losses was \$1.3 million for the six months ending June 30, 2012 compared to \$0.9 million for the six month period ending June 30, 2011. Provision for loan losses of \$0.6 million were made for the three months ended June 30, 2012 compared to \$0.4 million for the three month period ending June 30, 2011. Of the \$0.6 million provision in the current quarter, \$0.2 million was related to specific reserves on impaired loans identified in the quarter. The balance of \$0.4 million resulted from the effect of charge-offs on historical loss factors and increased loan balances.

Other income

For the three months ended June 30, 2012, non-interest income amounted to \$1.9 million, a \$0.5 million improvement, compared to \$1.4 million in the same 2011 quarter. The improvement was from increased gains from the sales of loans of \$0.3 million and from the increased service charges from lending activities mostly from increased residential mortgage loan activity. New business from the Company's trust department has led to \$42 thousand in higher returns

amounting to an increase of 40% in the second quarter of 2012 compared to the second quarter of 2011. These items were partially offset by the \$31 thousand OTTI in the second quarter of 2012. The Company did not have an OTTI charge in the second quarter of 2011.

For the six months ended June 30, 2012, non-interest income amounted to \$3.8 million, an increase of \$1.1 million, from the \$2.7 million recorded in the first half of 2011. The improvement in in the first half of 2012 was from increased gains from the sales of both securities and loans of \$0.2 million and \$0.5 million, respectively. The previously mentioned higher volume in residential mortgage lending helped boost gains from sales and generate residential mortgage loan service fees. In addition, growth in the trust department business and more interchange fees helped increase fee income by 53% and 12%, respectively in 2012 compared to 2011. These items were partially offset by a \$61 thousand increase in OTTI charges.

Other operating expenses

Other operating expenses increased \$58 thousand, or 1%, in the second quarter of 2012 compared to the second quarter of 2011. Salary and employee benefits increased \$0.1 million. Annual merit pay increases, a larger workforce and the ancillary benefit costs associated with more full-time equivalents increased salary and benefit by 5% in the second quarter of 2012 compared to the same quarter of 2011. Lower premises and equipment costs of \$0.1 million, or 12%, was due to lower occupancy costs associated with ownership of the Moosic branch which the Company leased from an unrelated third party in 2011 and lower property maintenance. The 22%, or \$44 thousand, increase in advertising and marketing was related to the creative production and execution of the Company's business-based testimonial branding campaign featuring television, radio and billboards. The branding is used to support a sales initiative based on a market segmentation plan that focused on targeting a specific sector within the Company's market. Loan collection expense increased by \$55 thousand in the June 30, 2012 quarter compared to the June 30, 2011 quarter due to foreclosure expenses and real estate taxes paid on non-performing assets. During the same period, ORE expense was \$43 thousand higher due to more ORE properties. The \$72 thousand, or 36%, decline in FDIC insurance premiums was caused by the application of the new assessment calculation.

For the six months ended June 30, 2012, other operating expenses increased \$0.3 million, or 3%, compared to the six months ended June 30, 2011. Salary and employee benefits increased \$0.2 million, or 5%, due to a larger work force. Compared to the first half of 2011, the average number of full-time equivalent number of employees increased from 158 to 162 in the first half of 2012. Loan collection expense increased by \$0.2 million in the six months ended June 30, 2011 compared to the six months ended June 30, 2011 due to foreclosure expenses and real estate taxes paid on non-performing assets. ORE expense increased \$35 thousand in the first six months of 2012 compared to the same period of 2011 due to an increase in ORE properties. Similar to the second quarter comparison, the increase in advertising and marketing was due to the emphasis placed on Company branding for targeting relationships in the Company's market place. The decrease in premises and equipment was due to lower expenses required for facility upkeep, property insurance, utilities and lease expenses associated with the acquisition of the Company's Moosic Branch. The \$0.1 million, or 15%, increase in other expense category was caused mostly by a non-recurring prepayment fee of \$0.2 million from the payoff of the \$5.0 million, 3.61%, FHLB loan in the first quarter of 2012.

Comparison of financial condition at

June 30, 2012 and December 31, 2011

Overview

Consolidated assets decreased \$11.0 million, or 2%, to \$595.7 million as of June 30, 2012 from \$606.7 million at December 31, 2011. The decrease was from lower borrowings and deposits of \$6.4 million and \$3.7 million, respectively, and from the payment of a year-end 2011 obligation related to a paid-off participated loan. These items were partially offset by greater retained earnings and an improvement of OCI from a \$0.8 million decline in the unrealized loss in the Company's investment securities portfolio.

Funds Deployed:

Investment securities

At the time of purchase, management classifies investment securities into one of three categories: trading, available-for-sale (AFS) or held-to-maturity (HTM). To date, management has not purchased any securities for trading purposes. Most of the securities the Company purchases are classified as AFS even though there is no immediate intent to sell them. The AFS designation affords management the flexibility to sell securities and position the balance sheet in response to capital levels, liquidity needs or changes in market conditions. Securities AFS are carried at fair value in the consolidated balance sheet with an adjustment to shareholders' equity, net of tax, presented under the caption "Accumulated other comprehensive loss." Securities designated as HTM are carried at amortized cost and

represent debt securities that the Company has the ability and intent to hold until maturity.

As of June 30, 2012, the carrying value of investment securities amounted to \$110.8 million, or 19% of total assets, compared to \$108.5 million, or 18% of total assets, at December 31, 2011. On June 30, 2012, approximately 48% of the carrying value of the investment portfolio was comprised of U.S. Government Sponsored Enterprise residential mortgage-backed securities (MBS – GSE residential or mortgage-backed securities) that amortize and provide monthly cash flow that the Company can use for reinvestment, operations or deposit outflow.

As of June 30, 2012, investment securities were comprised of HTM and AFS securities with carrying values of \$0.3 million and \$110.5 million, respectively. The AFS debt securities were recorded with a net unrealized loss in the amount of \$0.7 million and equity securities were recorded with an unrealized gain of \$0.2 million, compared to a \$1.8 million loss and a \$0.1 million gain, respectively as of December 31, 2011, or a net improvement of \$1.2 million during the first half of 2012.

The Company's investment policy is designed to complement its lending activity. During the six months ended June 30, 2012, the carrying value of total investments increased \$2.3 million, or 2%. Though the loan portfolio grew \$19.8 million during the second quarter of 2012, the Company uses excess cash generation to prudently grow the investment portfolio to manage liquidity, help preserve net interest margin and reduce credit risk. The Company uses cash flow generated from deposits, mortgage-backed securities' pay downs and bond calls to invest, re-invest and advantageously diversify the securities portfolio to help reduce the overall risk in the balance sheet.

A comparison of investment securities at June 30, 2012 and December 31, 2011 is as follows:

(dollars in thousands)	June 30, 2012		December 31, 2011	
	Amount	%	Amount	%
MBS - GSE residential	\$53,113	48.0 %	\$50,606	46.6 %
State & municipal subdivisions	30,825	27.8	30,159	27.8
Agency - GSE	24,825	22.4	25,873	23.8
Pooled trust preferred securities	1,601	1.4	1,466	1.4
Equity securities - financial services	445	0.4	439	0.4
Total	\$110,809	100.0%	\$108,543	100.0 %

Quarterly, management performs a review of the investment portfolio to determine the causes of declines in the fair value of each security. The Company uses inputs provided by independent third parties to determine the fair value of its investment securities portfolio. Inputs provided by the third parties are reviewed and corroborated by management. Evaluations of the causes of the unrealized losses are performed to determine whether impairment exists and whether the impairment is temporary or other-than-temporary. Considerations such as the Company's intent and ability to hold the securities to maturity, recoverability of the invested amounts over the intended holding period, the length of time and the severity in pricing decline below cost, the interest rate environment, the receipt of amounts contractually due and whether or not there is an active market for the security, for example, are applied, along with the financial condition of the issuer for management to make a realistic judgment of the probability that the Company will be unable to collect all amounts (principal and interest) due in determining whether a security is other-than-temporarily impaired. If a decline in value is deemed to be other-than-temporary, the amortized cost of the security is reduced by the credit impairment amount and a corresponding charge to current earnings is recognized. If at the time of sale, call or maturity the proceeds exceed the security's amortized cost, previous credit impairment charges may be fully or partially recovered.

The Company owns 13 tranches of pooled trust preferred securities (PreTSLs). As of June 30, 2012, the market for these securities and other issues of PreTSLs remained inactive. The inactivity was evidenced first by a significant widening of the bid-ask spread in the brokered markets in which PreTSLs trade, then by a significant decrease in the volume of trades relative to historical levels. To date, there has not been a new PreTSL issue since 2007. Newly imposed restrictions for institutions to qualify and receive favorable capital treatment have lessened the likelihood of new issues coming to market. There are currently very few market participants who are willing and/or able to transact for these securities. The Company was informed by its capital markets service provider that the volume of trading activity in PreTSLs is de minimis, restricted mostly to speculative hedge fund traders, transacted on a bid basis and can take as long as weeks to fill orders and for the transactions to settle. Therefore, the Company has concluded that the market for these securities continues to be inactive where pricing quotes are sparse, incorporate large illiquidity premiums, and exist with dislocation between spreads and default activity resulting in difficulties in assessing relative observable inputs to determine fair value. To determine PreTSL valuations, the Company uses an independent third party that employs *Moody's Wall Street Analytics*. Specifically, a fair value "Level 3" modeled income approach that maximizes the use of observable inputs and minimizes the use of unobservable inputs is more representative of fair value than a market-quote approach. Core assumption categories are: probability of default; loss given defaults; industry-wide correlations, discount rate and structural behavior. Discounted cash flows are modeled via Monte Carlo

simulation to determine the orderly liquidation value as an indication of fair value of all tranches of each PreTSL.

For the six months ended June 30, 2012, the Company engaged a structured finance products specialist firm to analyze the eight securities in the portfolio that have an amortized cost basis. The analysis establishes a base of fundamental cash flow values to determine whether the Company will receive all of its principal and interest. One security (PreTSL XXVII) was deemed to have a high probability of receiving all principal and interest payments and thus impairment was considered temporary. The firm applied the following steps and assumptions to the remaining seven securities to arrive at a single best estimate of cash flow that is used as a basis to determine the presence of OTTI:

o Data about the transaction structure, as defined in the offering indenture and the underlying collateral, were collected;

o The credit quality of the collateral was estimated using issuer specific probability of default for each security. Deferral of interest payments are treated as defaults. Once an issuer defaults, the potential for the tendency is correlated among other issuers. The loss given default, or the amount of cash lost to the investor is assumed to be 100% with no recovery of principal and no prepayments;

o The analysis uses a Monte Carlo simulation framework to simulate the time-to-default on a portfolio of obligors based on individual obligor default probabilities and inter-obligor correlations;

- 35 -

o Cash flow modeling was performed using the output from the simulation engine to arrive at the single best estimate of cash flow with respect to each tranche;

o Present value techniques as prescribed in the accounting guidance are used to determine the expected cash flows of each of the tranches. The present value technique for one of the OTTI securities is based upon a discount rate determined at the time of acquisition. For the other six OTTI securities, the discount rate used in the present value calculation is the yield to accrete beneficial interest;

o The present value results are then compared to the present value cash flow results from the immediately prior measurement date. An adverse change in estimated cash flow from the previous measurement date is indicative of credit related OTTI. If the present value of the cash flow is less than the amortized cost basis, the difference is charged to current earnings as an impairment loss on investment securities.

The results of the OTTI analysis (refer to Note 3, "Investment securities", within the notes to the consolidated financial statements for a complete description of the analysis performed) determined as of and for the three and six months ended June 30, 2012, the estimated value, based on the expected discounted cash flow, of two PreTSLs: IX and XVIII was insufficient to recover the amortized cost basis, and therefore has experienced credit-related impairment in the amounts of \$31 thousand and \$0.1 million, respectively, compared to \$75 thousand for the six months ended June 30, 2011. There was no OTTI required to be recorded in the second quarter of 2011. Credit-related OTTI is charged to current earnings as a component of other income in the consolidated statement of income. Future analyses could yield results that may be indicative of further impairment and may therefore require additional write-downs and corresponding credit related OTTI charges to current earnings.

Federal Home Loan Bank Stock

Investment in FHLB stock is required for membership in the organization and is carried at cost since there is no market value available. The amount the Company is required to invest is dependent upon the relative size of outstanding borrowings the Company has with the FHLB. The Company was not required to purchase FHLB stock during 2012 and 2011. Excess stock is typically repurchased from the Company at par if the level of borrowings decline to a predetermined level. In addition, the Company would typically earn a return or dividend on the amount invested. In order to preserve its capital, in December 2008 the FHLB declared a suspension on the redemption of its stock and ceased payment of quarterly dividends until such time it becomes prudent to reinstate either or both. During the fourth quarter of 2010, the FHLB announced a partial lifting and limited repurchase of the stock redemption provision of the suspension. Since then, the Company has been able to periodically redeem its shares which for the first half of 2012 amounted to \$0.4 million. During the first quarter of 2012 and then again during the second quarter, the FHLB declared its first cash dividends since 2008. Future redemptions and dividend payments will be predicated on the financial performance and health of the FHLB. Management believes that the FHLB will continue to be a primary source of wholesale liquidity for both short- and long-term funding and has concluded that its investment in FHLB stock is not other than temporarily impaired. There can be no assurance that future negative changes to the financial condition of the FHLB may not require the Company to recognize an impairment charge with respect to such holdings. The Company will continue to monitor the financial condition of the FHLB and assess its future ability to

resume normal dividend payments and stock redemption activities.

Loans held-for-sale (HFS)

Upon origination, certain residential mortgages are classified as HFS. In the event of market rate increases, fixed-rate loans and loans not immediately scheduled to re-price would no longer produce yields consistent with the current market. In low interest rate environments, the Company would be exposed to prepayment risk and, as rates on adjustable-rate loans decrease, interest income would be negatively affected. Consideration is given to the Company's current liquidity position and projected future liquidity needs. To better manage prepayment and interest rate risk, loans that meet these conditions may be classified as HFS. The carrying value of loans HFS is at the lower of cost or estimated fair value. If the fair values of these loans decline below their original cost, the difference is written down and charged to current earnings. Subsequent appreciation in the portfolio is credited to current earnings but only to the extent of previous write-downs.

During the six months ended June 30, 2012, residential mortgage loans with principal balances of \$39.5 million were sold into the secondary market with net gains of \$0.8 million recognized, compared to \$13.5 million and \$0.2 million, respectively, during the six months ended June 30, 2011.

The Company retains mortgage servicing rights (MSRs) on loans sold into the secondary market. MSRs are retained so that the Company can foster personal relationships with its loyal customer base. At June 30, 2012 and December 31, 2011, the servicing portfolio balance of sold residential mortgage loans was \$198.5 million and \$193.5 million, respectively.

Loans

The Company originates commercial and industrial (C&I), commercial real estate (CRE), residential mortgages, consumer, home equity and construction loans. The volume of originations remains dependent upon customer demand, current interest rates, the perception and duration of future interest rate levels, the general feeling as to the current and projected economy as well as, our strategy of reducing exposure on large credits. We continue to remain focused on relationship building, developing and implementing products and services to the broad spectrum of businesses that operates in our marketplace. The Company's goals center on building relationships by providing credit and cash management products, as well as trust and financial services. We continue to diversify our loan portfolio, utilizing loan participations (sharing loans with other financial institutions to reduce exposure) and guaranty programs to reduce risk in credit transactions. As the economy continues to improve we explore opportunities to provide credit and non-credit products as we keep in mind the necessity to control risk in these uncertain times.

Commercial and industrial

The commercial and industrial (C&I) loan portfolio increased \$0.4 million, or 0.5%, from \$68.3 million at December 31, 2011 to \$68.7 million at June 30, 2012. The retirement of several large credits, the continued economic uncertainty and the Company's conservative underwriting standards are likely to result in a modest and controlled C&I loan growth.

Commercial real estate

The commercial real estate loan portfolio had a minimal increase of \$2.5 million, or 1.5%, from \$165.5 million at December 31, 2011 to \$168.0 million as of June 30, 2012. The majority of the increase is in the construction loan portfolio. As the economy slowly improves the Company has seen some growth in new construction. The Company will continue its strategy of selectively originating commercial real estate facilities especially in the owner-occupied area.

Consumer loans

The consumer loan portfolio remained relatively stable with a minimal increase of \$1.1 million, or 1.3%, from \$88.3 million at December 31, 2011 to \$89.4 million at June 30, 2012. Within the portfolio was an increase in auto loan activity through the Company's dealer loan program partially offset by a decrease in home equity installment loans. The increase being caused by efforts in business development and the decrease is attributed to home equity installment

loan payoffs from mortgage refinances. These trends are expected to continue.

Residential

The residential portfolio increased \$15.8 million, or 18.8%, from \$84.2 million at December 31, 2011 to \$100.0 million at June 30, 2012. This increase is primarily attributed to a mortgage loan modification program and retaining in-house mortgages with a maturity of 15 years or less. The Company anticipates slight growth in the residential loan portfolio for the remainder of 2012.

The composition of the loan portfolio at June 30, 2012 and December 31, 2011, is summarized as follows:

(dollars in thousands)	June 30, 2012		December 31, 2011	
	Amount	%	Amount	%
Commercial and industrial	\$68,733	16.1 %	\$68,372	16.8 %
Commercial real estate:				
Non-owner occupied	80,611	18.9	79,475	19.6
Owner occupied	75,363	17.7	76,611	18.9
Construction	12,021	2.8	9,387	2.3
Consumer:				
Home equity installment	34,339	8.1	36,390	9.0
Home equity line of credit	32,670	7.7	32,486	8.0
Auto	16,609	3.9	13,539	3.3
Other	5,760	1.4	5,833	1.4
Residential:				
Real estate	95,646	22.4	80,091	19.7
Construction	4,366	1.0	4,110	1.0
Gross loans	426,118	100.0%	406,294	100.0 %
Less:				
Allowance for loan losses	(8,151)		(8,108)	
Net loans	\$417,967		\$398,186	
Loans held-for-sale	\$-		\$4,537	

Allowance for loan losses

Management evaluates the credit quality of the Company's loan portfolio and performs a formal review of the adequacy of the allowance for loan losses (the allowance) on a quarterly basis. The allowance reflects management's best estimate of the amount of credit losses in the loan portfolio. Management's judgment is based on the evaluation of individual loans, past experience, the assessment of current economic conditions and other relevant factors including the amounts and timing of cash flows expected to be received on impaired loans. Those estimates may be susceptible to significant change. The provision for loan losses represents the amount necessary to maintain an appropriate allowance. Loan losses are charged directly against the allowance when loans are deemed to be uncollectible. Recoveries from previously charged-off loans are added to the allowance when received.

Management applies two primary components during the loan review process to determine proper allowance levels. The two components are a specific loan loss allocation for loans that are deemed impaired and a general loan loss allocation for those loans not specifically allocated. The methodology to analyze the adequacy of the allowance for loan losses is as follows:

- identification of specific impaired loans by loan category;
- calculation of specific allowances where required for the impaired loans based on collateral and other objective and quantifiable evidence;
- determination of loans with similar credit characteristics within each class of the loan portfolio segment and eliminating the impaired loans;
 - application of historical loss percentages (two-year average) to pools to determine the allowance allocation;
- application of qualitative factor adjustment percentages to historical losses for trends or changes in the loan portfolio, and/or current economic conditions.

Allocation of the allowance for different categories of loans is based on the methodology as explained above. A key element of the methodology to determine the allowance is the Company's credit risk evaluation process, which includes credit risk grading of individual commercial loans. Commercial loans are assigned credit risk grades based on the Company's assessment of conditions that affect the borrower's ability to meet its contractual obligations under the loan agreement. That process includes reviewing borrowers' current financial information, historical payment experience, credit documentation, public information and other information specific to each individual borrower. Upon review, the commercial loan credit risk grade is revised or reaffirmed. The credit risk grades may be changed at any time management feels an upgrade or downgrade may be warranted. The credit risk grades for the commercial loan portfolio are taken into account in the reserve methodology and loss factors are applied based upon the credit risk grades. The loss factors applied are based upon the Company's historical experience as well as what management believes to be best practices and within common industry standards. Historical experience reveals there is a direct correlation between the credit risk grades and loan charge-offs. The changes in allocations in the commercial loan portfolio from period-to-period are based upon the credit risk grading system and from periodic reviews of the loan portfolio.

Each quarter, management performs an assessment of the allowance and the provision for loan losses. The Company's Special Assets Committee meets quarterly and the applicable lenders discuss each relationship under review and reach a consensus on the appropriate estimated loss amount based on current accounting guidelines. The Special Assets Committee's focus is on ensuring the pertinent facts are considered and the reserve amounts pursuant to the accounting principles are reasonable. The assessment process includes the review of all loans on a non-accruing basis as well as a review of certain loans to which the lenders or the Company's Credit Administration function have assigned a criticized or classified risk rating.

Total charge-offs, net of recoveries, for the six months ended June 30, 2012 were \$1.3 million, compared to \$0.6 million in the first six months of 2011. Commercial and industrial loans recorded net charge-offs of \$53 thousand for the six months ended June 30, 2012, as opposed to recoveries of \$7 thousand for the six months ended June 30, 2011. Consumer loan net charge-offs of \$0.4 million were recorded during the six months ended June 30, 2012 and were \$0.4 million at the June 30, 2011 like period end. There were \$0.7 million of commercial real estate net charge-offs during the six months ended June 30, 2012 compared to \$0.2 million at June 30, 2011. Residential real estate net charge-offs totaled \$45 thousand for the six month period ending June 30, 2012 versus \$92 thousand, of net charge-offs at June 30, 2011. For a discussion on the provision for loan losses, see the "Provision for loan losses," located in the results of operations section of management's discussion and analysis contained herein.

The allowance for loan losses was \$8.2 million at June 30, 2012, and \$8.1 million at December 31, 2011. Management believes that the current balance in the allowance for loan losses of \$8.2 million is sufficient to withstand the identified potential credit quality issues that may arise and others unidentified but inherent to the portfolio. Potential problem loans are those where there is known information that leads management to believe repayment of principal and/or interest is in jeopardy and the loans are currently neither on non-accrual status nor past due 90 days or more. Given continuing pressure on property values and the generally uncertain economic backdrop, there could be additional instances which become identified in future periods that may require additional charge-offs and/or increases to the allowance.

The following tables set forth the activity in the allowance for loan losses and certain key ratios for the period indicated:

(dollars in thousands)	As of and for the six months ended June 30, 2012		As of and for the twelve months ended December 31, 2011		As of and for the six months ended June 30, 2011

Allowance for loan losses to loans 90 days or more past due and accruing	39.38	x	30.55	x	14.06	x

The allowance for loan losses can generally absorb losses throughout the loan portfolio. However, in some instances an allocation is made for specific loans or groups of loans. Allocation of the allowance for loan losses for different categories of loans is based on the methodology used by the Company, as previously explained. The changes in the allocations from year-to-year are based upon year-end reviews of the loan portfolio.

Non-performing assets

The Company defines non-performing assets as accruing loans past due 90 days or more, non-accrual loans, troubled debt restructured loans (TDRs), other real estate owned (ORE), repossessed assets and non-accrual investment securities. As of June 30, 2012, non-performing assets represented 3.70% of total assets compared to 3.58% at December 31, 2011.

In the review of loans for both delinquency and collateral sufficiency, management concluded that there were a number of loans that lacked the ability to repay in accordance with contractual terms. The decision to place loans on non-accrual status is made on an individual basis after considering factors pertaining to each specific loan. The commercial loans are placed on non-accrual status when management has determined that payment of all contractual principal and interest is in doubt or the loan is past due 90 days or more as to principal and interest, unless well-secured and in the process of collection. Consumer loans secured by real estate are placed on non-accrual status at 120 days past due as to principal and interest, and unsecured consumer loans are charged-off when the loan is 90 days or more past due as to principal and interest. Uncollected interest income accrued on all loans placed on non-accrual is reversed and charged to interest income.

Non-performing loans decreased from \$14.2 million on December 31, 2011 to \$13.7 million at June 30, 2012. At December 31, 2011, the over 90 day past due portion was \$0.3 million and was comprised of three loans ranging from \$47 thousand to \$0.2 million, and the non-accrual loan portion numbered 74 loans ranging from \$3 thousand to \$3.4 million. At June 30, 2012, there were 11 loans to unrelated borrowers aggregating \$0.2 million in the over 90 day category ranging from less than \$1 thousand to \$0.1 million and 73 loans to unrelated borrowers ranging from \$2 thousand to \$3.4 million in the non-accrual category. The net decline for the quarter resulted from a combination of charge offs, transfers to ORE and repayments, partially offset by additions to non-accrual loans.

The Company, on a regular basis, reviews changes to loans to determine if they meet the definition of a TDR. TDR loans arise when a borrower experiences financial difficulty and the Company grants a concession that it would not otherwise grant based on current underwriting standards in order to maximize the Company's recovery. TDR loans aggregated \$6.4 million at June 30, 2012 which consisted of \$5.3 million of accruing commercial real estate loans, \$1.1 million of non-accrual commercial real estate loans and \$43 thousand of accruing commercial loans. At December 31, 2011, TDR loans aggregated \$6.7 million which consisted of \$5.3 million of accruing commercial real estate loans, \$1.4 million of non-accrual commercial real estate loans and \$44 thousand of accruing commercial loans. During the second quarter of 2012 four loans were reduced by payments aggregating \$82 thousand.

If applicable, a TDR loan classified as non-accrual would require a minimum of six months of payments before consideration for a return to accrual status. Concessions made to borrowers typically involve an extension of the loan's maturity date or a change in the loan's amortization period. The Company believes concessions have been made in the best interests of the borrower and the Company. The Company has not reduced interest rates or forgiven principal with respect to these loans. If loans characterized as a TDR perform according to the restructured terms for a satisfactory period of time, the TDR designation may be removed in a new calendar year if the loan yields a market rate of interest.

At June 30, 2012, the non-accrual loans aggregated \$13.5 million as compared to \$14.0 million at December 31, 2011. The net decrease in the level of non-accrual loans during the period ending June 30, 2012 occurred as follows: additions to the non-accrual loan component of the non-performing assets totaling \$2.7 million were made during the year; these were offset by reductions or payoffs of \$0.8 million, charge-offs of \$1.1 million, \$1.1 million of transfers to ORE and \$0.2 million of loans that returned to performing status. Loans past due 90 days or more and accruing

were \$0.2 million at June 30, 2012, and \$0.3 million at December 31, 2011. The ratio of non-performing loans to total loans was 3.21% at June 30, 2012 compared to 3.46% at December 31, 2011.

Payments received on non-accrual loans are recognized on a cash method. Payments are first applied against the outstanding principal balance, then to the recovery of any charged-off loan amounts. Any excess is treated as a recovery of interest income. During 2011, the Company collected approximately \$77 thousand of interest income recognized on the cash basis. There has been no interest income recognized on the cash basis in 2012. If the non-accrual loans that were outstanding as of June 30, 2012 had been performing in accordance with their original terms, the Company would have recognized interest income with respect to such loans of \$0.3 million for the period ended June 30, 2012.

- 40 -

The following table sets forth non-performing assets data as of the period indicated:

(dollars in thousands)	June 30, 2012	December 31, 2011	June 30, 2011	
Loans past due 90 days or more and accruing	\$ 207	\$ 265	\$ 579	
Non-accrual loans *	13,486	13,962	9,591	
Total non-performing loans	13,693	14,227	10,170	
Troubled debt restructurings	5,309	5,314	2,068	
Other real estate owned	2,086	1,169	847	
Non-accrual securities	935	1,038	881	
Total non-performing assets	\$ 22,023	\$ 21,748	\$ 13,966	
Total loans, including loans held-for-sale	\$ 426,118	\$ 410,831	\$ 406,816	
Total assets	\$ 595,736	\$ 606,742	\$ 588,684	
Non-accrual loans to total loans	3.16	% 3.40	% 2.36	%
Non-performing loans to total loans	3.21	% 3.46	% 2.50	%
Non-performing assets to total assets	3.70	% 3.58	% 2.37	%

* In the table above, the amount includes non-accrual TDRs of \$1.1 million, \$1.4 million and \$1.5 million as of June 30, 2012, December 31, 2011 and June 30, 2011, respectively.

The composition of non-performing loans as of June 30, 2012 is as follows:

(dollars in thousands)	Gross loan balances	Past due 90 days or more and still accruing	Non-accrual loans	Total non-performing loans	% of gross loans
Commercial and industrial	\$68,733	\$ 5	\$273	\$ 278	0.40 %
Commercial real estate:

Residential:					
Real estate	95,646	114	2,541	2,655	2.78 %
Construction	4,366	-	70	70	1.60 %
Total	\$426,118	\$ 207	\$13,486	\$ 13,693	3.21 %

Foreclosed assets held-for-sale

Foreclosed assets held-for-sale aggregated \$2.1 million at June 30, 2012 and consisted of 12 ORE properties, which stemmed from 11 unrelated borrowers, all of which were listed for sale with local realtors. Seven properties totaling \$1.2 million were added during 2012. Of the remaining five properties, three properties aggregating \$0.2 million were acquired in 2011, one property stems from 2010 for \$0.6 million, and one dates to 2009 for \$50 thousand. As of December 31, 2011, ORE consisted of six properties from unrelated borrowers with an aggregate value of \$1.2 million.

Funds Provided:**Deposits**

The Company is a community based commercial depository financial institution, member FDIC, which offers a variety of deposit products with varying ranges of interest rates and terms. Deposit products include transaction accounts such as: savings; clubs; interest-bearing checking (NOW); money market and non-interest bearing checking (DDA). The Company also offers short- and long-term deposit accounts such as certificates of deposit. Certificates of deposit, or CDs, are deposits with stated maturities which can range from seven days to ten years. The flow of deposits is influenced by economic conditions, changes in the interest rate environment, pricing and competition. To determine interest rates on its deposit products, the Company considers local competition, spreads to earning-asset yields, liquidity position and rates charged for alternative sources of funding such as short-term borrowings and FHLB advances. Though the Company competes for deposits, the interest rate setting strategy also considers the Company's balance sheet structure and cost effective strategies that are mindful of the current economic backdrop.

The following table represents the components of deposits as of the date indicated:

(dollars in thousands)	June 30, 2012		December 31, 2011	
	Amount	%	Amount	%
Money market	\$87,965	17.2 %	\$ 107,675	20.9 %
NOW	82,923	16.2	79,127	15.3
Savings and clubs	110,752	21.6	107,500	20.9
Certificates of deposit	120,147	23.5	125,345	24.3
Total interest-bearing	401,787	78.5	419,647	81.4
Non-interest bearing	110,283	21.5	96,155	18.6
Total deposits	\$512,070	100.0%	\$515,802	100.0 %

Compared to December 31, 2011, total deposits declined \$3.7 million, or 1%, during the six months ended June 30, 2012. The decrease stems from a decline in money market accounts of \$19.7 million and CDs of \$5.2 million partially offset by growth in non-interest bearing DDAs of \$14.1 million, savings and clubs of \$3.3 million and NOW accounts of \$3.8 million. Generally, deposits are obtained from consumers and businesses within the communities that surround the Company's 11 branch offices and all deposits are insured by the FDIC up to the full extent permitted by law.

The low interest rate environment continues to cause customers to seek short-term alternatives for their deposits. Certificates of deposit declined \$5.2 million, or 4%, in the first half of 2012. The Company continues to experience a shift toward transactional savings accounts which have increased \$3.3 million, or 3%, in the first half of 2012. This

pattern will most likely continue until interest rates rise. A significant decrease in the business sector of money market deposit accounts have caused a decline of \$19.7 million, or 18%, in the six months ended June 30, 2012. Additionally, the expiration of money market promotions for retail depositors has also impacted money market levels as some of these deposits shifted into savings accounts that earn a slightly higher rate of interest. The increase in non-interest bearing checking and interest-bearing NOW deposits was due to the Company focusing on a new checking account campaign targeting the acquisition of retail households along with continued sales emphasis on broadening and deepening existing business and retail relationships with operational checking accounts.

The gathering of core deposits continues to be a primary objective for both retail and business deposits. The continued low interest rate environment has resulted in a wide-spread preference for customers to place their money in non-maturing interest-bearing accounts rather than to renew maturing CDs. Balances in CDs continue to decline due to an unattractive rate environment for long-termed deposit products coupled with a desire to keep money liquid. When market rates do rise, the Company will focus on and promote CD gathering strategies that will strive to increase time deposits while maintaining its low-costing core deposit foundation.

The Company uses the Certificate of Deposit Account Registry Service (CDARS) reciprocal program to obtain FDIC insurance protection for customers who have large deposits that at times may exceed the FDIC maximum amount of \$250,000. In the CDARS program, deposits with varying terms and interest rates, originated in the Company's own markets, are exchanged for deposits of other financial institutions that are members in the CDARS network. By placing these deposits in other participating institutions, the deposits of our customers are fully insured by the FDIC. In return for deposits placed with network institutions, the Company receives from network institutions deposits that are approximately equal in amount and are comprised of terms similar to those placed for our customers. Deposits the Company receives, or reciprocal deposits, from other institutions are considered brokered deposits by regulatory definitions. As of June 30, 2012, CDARS represented \$10.1 million, or 2%, of total deposits, compared to \$11.0 million, or 2%, of total deposits at December 31, 2011.

Excluding CDARS, certificates of deposit accounts of \$100,000 or more amounted to \$42.0 million and \$41.9 million at June 30, 2012 and December 31, 2011, respectively. Certificates of deposit of \$250,000 or more amounted to \$16.0 million and \$13.6 million as of June 30, 2012 and December 31, 2011.

Including CDARS, approximately 30% of the CDs, with a weighted-average interest rate of 1.01%, are scheduled to mature in 2012 and an additional 33%, with a weighted-average interest rate of 1.13%, are scheduled to mature in 2013. Renewing CDs may re-price to lower or higher market rates depending on the direction of interest rate movements, the shape of the yield curve, competition, the rate profile of the maturing accounts and depositor preference for alternative products. In this current low interest rate environment, a widespread preference has been for customers with maturing CDs to hold their deposits in readily available transaction products such as savings or money market accounts. When interest rates begin to rise, the Company expects CDs to grow to more historical normal levels of total deposits with the possibility of concurring abatement in transactional deposit balances.

Borrowings

Borrowings are used as a complement to deposit generation as an alternative funding source whereby the Company will borrow under customer repurchase agreements in the local market, advances from the Federal Home Loan Bank of Pittsburgh (FHLB) and other correspondent banks for asset growth and liquidity needs.

Repurchase agreements are non-insured interest-bearing liabilities that have a perfected security interest in qualified investments of the Company. The FDIC Depositor Protection Act of 2009 requires banks to provide a perfected security interest to the purchasers of uninsured repurchase agreements. Repurchase agreements are offered through a sweep product. A sweep account is designed to ensure that on a daily basis, an attached DDA is adequately funded and excess funds are transferred, or swept, into an interest-bearing overnight repurchase agreement account. Due to the constant inflow and outflow of funds of the sweep product, their balances tend to be somewhat volatile, similar to a DDA. Customer liquidity is the typical cause for variances in repurchase agreements, which for the first six months of 2012 decreased \$1.4 million, or 15%, from year-end December 31, 2011.

In response to interest rate margin compression, in February 2012, the Company paid off \$5.0 million of its outstanding long-term debt and incurred a prepayment fee of \$0.2 million. The advance carried an interest rate of 3.61% and was scheduled to mature in the fourth quarter of 2013. Proceeds from the sale of AFS securities and cash on-hand were used to fund the payoff.

The following table represents the components of borrowings as of the date indicated:

(dollars in thousands)	June 30, 2012		December 31, 2011	
	Amount	%	Amount	%
Securities sold under repurchase agreements	\$8,106	33.6 %	\$9,507	31.2 %
Long-term FHLB advances	16,000	66.4	21,000	68.8

Total	\$24,106	100.0%	\$ 30,507	100.0 %
-------	----------	--------	-----------	---------

Accrued interest payable and other liabilities

The \$3.8 million decrease in other liabilities was caused by the distribution of funds to participant banks of a participated loan that paid off on the last business day of December 2011.

Item 3. Quantitative and Qualitative Disclosure About Market Risk

Management of interest rate risk and market risk analysis.

The adequacy and effectiveness of an institution's interest rate risk management process and the level of its exposures are critical factors in the regulatory evaluation of an institution's sensitivity to changes in interest rates and capital adequacy. Management believes the Company's interest rate risk measurement framework is sound and provides an effective means to measure, monitor, analyze, identify and control interest rate risk in the balance sheet.

The Company is subject to the interest rate risks inherent in its lending, investing and financing activities. Fluctuations of interest rates will impact interest income and interest expense along with affecting market values of all interest-earning assets and interest-bearing liabilities, except for those assets or liabilities with a short term remaining to maturity. Interest rate risk management is an integral part of the asset/liability management process. The Company has instituted certain procedures and policy guidelines to manage the interest rate risk position. Those internal policies enable the Company to react to changes in market rates to protect net interest income from significant fluctuations. The primary objective in managing interest rate risk is to minimize the adverse impact of changes in interest rates on net interest income along with creating an asset/liability structure that maximizes earnings.

Asset/Liability Management. One major objective of the Company when managing the rate sensitivity of its assets and liabilities is to stabilize net interest income. The management of and authority to assume interest rate risk is the responsibility of the Company's Asset/Liability Committee (ALCO), which is comprised of senior management and members of the board of directors. ALCO meets quarterly to monitor the relationship of interest-sensitive assets to interest-sensitive liabilities. The process to review interest rate risk is a regular part of managing the Company. Consistent policies and practices of measuring and reporting interest rate risk exposure, particularly regarding the treatment of non-contractual assets and liabilities, are in effect. In addition, there is an annual process to review the interest rate risk policy with the board of directors which includes limits on the impact to earnings from shifts in interest rates.

Interest Rate Risk Measurement. Interest rate risk is monitored through the use of three complementary measures: static gap analysis, earnings at risk simulation and economic value at risk simulation. While each of the interest rate risk measurements has limitations, taken together they represent a reasonably comprehensive view of the magnitude of interest rate risk in the Company and the distribution of risk along the yield curve, the level of risk through time and the amount of exposure to changes in certain interest rate relationships.

Static Gap. The ratio between assets and liabilities re-pricing in specific time intervals is referred to as an interest rate sensitivity gap. Interest rate sensitivity gaps can be managed to take advantage of the slope of the yield curve as well as forecasted changes in the level of interest rate changes.

To manage this interest rate sensitivity gap position, an asset/liability model commonly known as cumulative gap analysis is used to monitor the difference in the volume of the Company's interest-sensitive assets and liabilities that mature or re-price within given time intervals. A positive gap (asset sensitive) indicates that more assets will mature or re-price during a given period compared to liabilities, while a negative gap (liability sensitive) has the opposite effect. The Company employs computerized net interest income simulation modeling to assist in quantifying interest rate risk exposure. This process measures and quantifies the impact on net interest income through varying interest rate changes and balance sheet compositions. The use of this model assists the ALCO to gauge the effects of the interest rate changes on interest-sensitive assets and liabilities in order to determine what impact these rate changes will have upon the net interest spread. As of June 30, 2012, the Bank maintained a one-year cumulative gap of positive \$83.8 million, or 14.1%, of total assets. The effect of this positive gap position provided a mismatch of assets and liabilities which may expose the Bank to interest rate risk during periods of falling interest rates. Conversely, in an increasing interest rate environment, net interest income could be positively impacted because more assets than liabilities would re-price upward during the one-year period.

Certain shortcomings are inherent in the method of analysis discussed above and presented in the next table. Although certain assets and liabilities may have similar maturities or periods of re-pricing, they may react in different degrees to changes in market interest rates. The interest rates on certain types of assets and liabilities may fluctuate in advance of changes in market interest rates, while interest rates on other types of assets and liabilities may lag behind changes in market interest rates. Certain assets, such as adjustable-rate mortgages, have features which restrict changes in interest rates on a short-term basis and over the life of the asset. In the event of a change in interest rates, prepayment and early withdrawal levels may deviate significantly from those assumed in calculating the table. The ability of many borrowers to service their adjustable-rate debt may decrease in the event of an interest rate increase.

The following table illustrates the Company's interest sensitivity gap position at June 30, 2012:

More than More than

Edgar Filing: FIDELITY D & D BANCORP INC - Form 10-Q

(1) Includes FHLB stock and the net unrealized gains/losses on securities AFS.

Investments and loans are included in the earlier of the period in which interest rates were next scheduled to adjust or the period in which they are due. In addition, loans are included in the periods in which they are scheduled to be repaid based on scheduled amortization. For amortizing loans and MBS – GSE residential, annual prepayment rates are assumed reflecting historical experience as well as management’s knowledge and experience of its loan products.

The Bank's demand and savings accounts are generally subject to immediate withdrawal. However, management considers a certain amount of such accounts to be core accounts having significantly longer effective maturities (3) based on the retention experiences of such deposits in changing interest rate environments. The effective maturities presented are the recommended maturity distribution limits for non-maturing deposits based on historical deposit studies.

Earnings at Risk and Economic Value at Risk Simulations. The Company recognizes that more sophisticated tools exist for measuring the interest rate risk in the balance sheet that extend beyond static re-pricing gap analysis. Although it will continue to measure its re-pricing gap position, the Company utilizes additional modeling for identifying and measuring the interest rate risk in the overall balance sheet. The ALCO is responsible for focusing on "earnings at risk" and "economic value at risk", and how both relate to the risk-based capital position when analyzing the interest rate risk.

Earnings at Risk. Earnings at risk simulation measures the change in net interest income and net income should interest rates rise and fall. The simulation recognizes that not all assets and liabilities re-price one-for-one with market rates (e.g., savings rate). The ALCO looks at "earnings at risk" to determine income changes from a base case scenario under an immediate increase and decrease of 200 basis points in interest rate simulation models.

Economic Value at Risk. Earnings at risk simulation measures the short-term risk in the balance sheet. Economic value (or portfolio equity) at risk measures the long-term risk by finding the net present value of the future cash flows from the Company's existing assets and liabilities. The ALCO examines this ratio quarterly utilizing an increase and decrease of 200 basis points in interest rate simulation models. The ALCO recognizes that, in some instances, this ratio may contradict the "earnings at risk" ratio.

The following table illustrates the simulated impact of 200 basis points upward or downward movement in interest rates on net interest income, net income and the change in the economic value (portfolio equity). This analysis assumes that interest-earning asset and interest-bearing liability levels at June 30, 2012 remain constant. The impact of the rate movements was developed by simulating the income effect of yields / rates changing over a twelve-month period from the June 30, 2012 levels:

	% change	
	Rates +200	Rates -200
Earnings at risk:		
Net interest income	6.0 %	(3.5)%
Net income	20.2	(11.6)
Economic value at risk:		
Economic value of equity	(7.3)	(5.7)
Economic value of equity as a percent of total assets	(0.8)	(0.6)

Economic value has the most meaning when viewed within the context of risk-based capital. Therefore, the economic value may normally change beyond the Company's policy guideline for a short period of time as long as the risk-based capital ratio (after adjusting for the excess equity exposure) is greater than 10%. As of June 30, 2012, the Company's risk-based capital ratio was 13.3%.

The table below summarizes estimated changes in net interest income over a twelve-month period beginning July 1, 2012, under alternate interest rate scenarios using the income simulation model described above:

(dollars in thousands)	Net interest income	\$ variance	% variance	
<u>Simulated change in interest rates</u>				
+200 basis points	\$ 20,966	\$ 1,180	6.0	%
+100 basis points	20,281	495	2.5	
Flat rate	19,786	-	-	
-100 basis points	19,372	(414)	(2.1)	
-200 basis points	19,093	(693)	(3.5)	

Simulation models require assumptions about certain categories of assets and liabilities. The models schedule existing assets and liabilities by their contractual maturity, estimated likely call date or earliest re-pricing opportunity. MBS – GSE residential securities and amortizing loans are scheduled based on their anticipated cash flow including estimated prepayments. For investment securities, the Bank uses a third-party service to provide cash flow estimates in the various rate environments. Savings, money market and NOW accounts do not have a stated maturity or re-pricing term and can be withdrawn or re-priced at any time. This may impact the interest margin if more expensive alternative sources of deposits are required to fund loans or deposit runoff. Management projects the re-pricing characteristics of these accounts based on historical performance and assumptions that it believes reflect their rate sensitivity. The model reinvests all maturities, repayments and prepayments for each type of asset or liability into the same product for a new like term at current product interest rates. As a result, the mix of interest-earning assets and interest bearing-liabilities is held constant.

Liquidity

Liquidity management ensures that adequate funds will be available to meet customers' needs for borrowings, deposit withdrawals and maturities and normal operating expenses of the Company. Current sources of liquidity are cash and cash equivalents, asset maturities and pay-downs within one year, loans HFS, investments AFS, growth of core deposits, growth of repurchase agreements, increases of other borrowed funds from correspondent banks and issuance of capital stock. Though regularly scheduled investment and loan payments are a dependable source of daily funds, sales of loans HFS, investments AFS, deposit activity and investment and loan prepayments are significantly influenced by general economic conditions and the interest rate environment. During low and declining interest rate environments, prepayments from interest-sensitive assets tend to accelerate and provide significant liquidity which can be used to invest in other interest-earning assets but at lower market rates. Conversely, during periods of high and rising interest rates, prepayments from interest-sensitive assets tend to decelerate causing prepayments from mortgage loans and the MBS-GSE residential securities portfolio to decrease. Rising interest rates may also cause deposit inflow to accelerate at higher market interest rates. The Company closely monitors activity in the capital markets and takes appropriate action to ensure that the liquidity levels are adequate for funding, investing and operating activities.

The Company employs a contingency funding plan (CFP) that sets a framework for handling liquidity issues in the event circumstances arise which the Company deems to be less than normal. To accomplish this, the Company established guidelines for identifying, measuring, monitoring and managing the resolution of potentially serious liquidity crises. The Company's CFP outlines required monitoring tools, acceptable alternative funding sources and required actions during various liquidity scenarios. Thus, the Company has implemented a proactive means for the measurement and resolution for dealing with potentially significant adverse liquidity issues. At least quarterly, the CFP monitoring tools, current liquidity position and monthly projected liquidity sources and uses are presented and reviewed by the Company's ALCO. As of June 30, 2012, the Company has not experienced any adverse liquidity issues that would give rise to its inability to raise liquidity in an emergency situation.

For the six months ended June 30, 2012, the Company used \$29.4 million of cash. The Company's operations provided \$7.5 million mostly from \$10.1 million of net cash inflow from the components of net interest income, \$7.0 million of net proceeds from mortgage banking services, partially offset by \$3.7 million remitted to area banks from the late 2011 payoff of a participated loan, \$1.2 million in estimated income tax payments and approximately \$4.7 million of all other expenditures related to operations primarily from cash settled net non-interest expenses. The Company used excess liquidity and cash generated from operations, proceeds from sales of investment securities AFS and maturing and prepaying earning assets to fund net loan growth, run off of deposits and repurchase agreements, facility expansion and to pay down \$5.0 million of long-term debt with the FHLB. After the payment of quarterly dividends, the Company was able to retain the \$22.8 million that will be used to prudently grow interest-earning assets, make facility upgrades and provide for the unpredictable deposit cash outflow from the Company's municipal customers.

The Company is a party to financial instruments with off-balance sheet risk in the normal course of business in order to meet the financing needs of its customers and in connection with the overall interest rate management strategy. These instruments involve, to a varying degree, elements of credit, interest rate and liquidity risk. In accordance with

GAAP, these instruments are not recorded in the consolidated financial statements. Such instruments primarily include lending commitments. Lending commitments include commitments to originate loans and commitments to fund unused lines of credit. Commitments to extend credit are agreements to lend to a customer as long as there is no violation of any condition established by contract. Commitments generally have fixed expiration dates or other termination clauses and may require payment of a fee. Since some of the commitments are expected to expire without being drawn upon, the total commitment amounts do not necessarily represent future cash requirements.

In addition to lending commitments, the Company has contractual obligations related to operating lease obligations, certificates of deposit, FHLB advances and repurchase agreements. Operating lease commitments are obligations under various non-cancelable operating leases on buildings and land used for office space and other bank purposes. The Company's position with respect to lending commitments and significant contractual obligations, both on a short- and long-term basis has not changed materially from December 31, 2011, with the exception of the obligation related to the lease commitments for the Company's Moosic and Kingston branches. During the first quarter of 2012, the Company purchased its Moosic branch from an unaffiliated third party for \$0.5 million. The facility had been previously leased under the terms of an operating lease that extended through 2019. As a result of this purchase, the Company is no longer obligated for \$0.5 million in future minimum lease payments related to the Moosic branch. During the third quarter of 2012, the Company purchased its Kingston branch from an unaffiliated third party for \$0.7 million. The facility had been previously leased under the terms of an operating lease that extended through 2028. As a result of this purchase, the Company is no longer obligated for \$0.9 million in future minimum lease payments related to the Kingston branch.

As of June 30, 2012, the Company maintained \$22.8 million in cash and cash equivalents and \$110.5 million in securities AFS. In addition, as of June 30, 2012, the Company had approximately \$143.9 million available to borrow from the FHLB, \$21.0 million available from other correspondent banks, \$21.8 million from the CDARS program and \$21.4 million (including the Borrower-In-Custody [BIC] program) from the Discount Window of the Federal Reserve Bank (FRB). The purpose of the BIC arrangement is to provide flexibility to banks so they may increase their pool of pledged collateral while avoiding the inconvenience and cost of transporting collateral and supporting documentation to the FRB. The combined total of \$341.3 million represented 57% of total assets as of June 30, 2012. Management believes this level of liquidity to be strong and adequate to support current operations.

Capital

During the six months ended June 30, 2012, total shareholders' equity increased \$2.9 million, or 5%. The increase was due principally from: net income of \$2.6 million; a \$0.8 million after tax improvement in other comprehensive income caused by a lower unrealized loss position in the market value of the AFS securities portfolio; \$0.7 million from proceeds from employees enrolled in the Company's Employee Stock Purchase and Dividend Reinvestment Plans; partially offset by \$1.1 million on the declaration of quarterly cash dividends.

As of June 30, 2012, the Company's unrealized loss position amounted to \$0.3 million, net of tax, from securities AFS, an improvement compared to the net unrealized loss of \$1.1 million as of December 31, 2011. At June 30, 2012, the net-of-tax unrealized losses in the Company's portfolio of pooled trust preferred securities approximated \$3.1 million of the total \$0.3 million net loss with the other securities recorded at a net unrealized gain of \$2.8 million. The condition of the economy continues to assert uncertainty in the financial and capital markets and has had a sizable and prolonged negative impact on the fair value estimates on the securities in banks' investment portfolios, including the Company's investment portfolio. Management of the Company maintains these changes are due principally to liquidity problems in the financial markets and to a lesser extent to the deterioration in the creditworthiness of the issuers. When Treasury rates begin to rise, the value of the bond portfolio will typically decline as bond values move in an inverse direction to the movement in interest rates. As such there is no assurance that future realized and unrealized losses will not be recognized from the Company's portfolio of investment securities.

The Company (on a consolidated basis) and the Bank are subject to various regulatory capital requirements administered by the federal banking agencies. Failure to meet minimum capital requirements can initiate certain mandatory and possible additional discretionary actions by regulators that, if undertaken, could have a direct material effect on the Company's and the Bank's financial statements. Under capital adequacy guidelines and the regulatory framework for prompt corrective action, the Company and the Bank must meet specific capital guidelines that involve quantitative measures of their assets, liabilities and certain off-balance-sheet items as calculated under regulatory accounting practices. The capital amounts and classification are also subject to qualitative judgments by the regulators about components, risk-weightings and other factors. Prompt corrective action provisions are not applicable to bank holding companies.

Under these guidelines, assets and certain off-balance sheet items are assigned to broad risk categories, each with appropriate weights. The resulting capital ratios represent capital as a percentage of total risk-weighted assets and certain off-balance sheet items. The appropriate risk-weighting, pursuant to regulatory guidelines, requires a gross-up in the risk-weighting of securities that were rated below investment grade, thereby significantly inflating the total risk-weighted assets. This requirement had an adverse impact on the total capital and Tier I capital ratios in 2012 and 2011. The regulatory guidelines require all banks and bank holding companies to maintain a minimum ratio of total risk-based capital to total risk-weighted assets (Total Risk Adjusted Capital) of 8%, including Tier I capital to total risk-weighted assets (Tier I Capital) of 4% and Tier I capital to average total assets (Leverage Ratio) of at least 4%. As of June 30, 2012, the Company and the Bank met all capital adequacy requirements to which it was subject.

The Company continues to closely monitor and evaluate alternatives to enhance its capital ratios as the regulatory and economic environments change. The following table depicts the capital amounts and ratios of the Company and the Bank as of June 30, 2012:

(dollars in thousands) As of June 30, 2012:	Actual		For capital adequacy purposes		To be well capitalized under prompt corrective action provisions	
	Amount	Ratio	Amount	Ratio	Amount	Ratio
Total capital (to risk-weighted assets)						
Consolidated	\$61,293	13.3%	≥ \$36,909	≥ 8.0%	N/A	N/A
Bank	\$61,140	13.3%	≥ \$36,903	≥ 8.0%	≥ \$46,128	≥ 10.0%
Tier I capital (to risk-weighted assets)						
Consolidated	\$55,427	12.0%	≥ \$18,454	≥ 4.0%	N/A	N/A
Bank	\$55,344	12.0%	≥ \$18,451	≥ 4.0%	≥ \$27,677	≥ 6.0 %
Tier I capital (to average assets)						
Consolidated	\$55,427	9.1 %	≥ \$24,316	≥ 4.0%	N/A	N/A
Bank	\$55,344	9.1 %	≥ \$24,300	≥ 4.0%	≥ \$30,376	≥ 5.0 %

In June 2012, the Federal Reserve Bank, the FDIC and the OCC issued proposed rules that would revise bank regulatory capital requirements and the risk-weighted asset rules. These rules represent the most extensive changes to bank capital requirements in the recent past. The rules will extend large parts of a regulatory capital administration to all U.S. banks and their holding companies, other than the smallest bank holding companies (generally, those with under \$500 million in consolidated assets). The rules are expected to go into effect on January 1, 2013. However, in some situations full compliance with the rules would not be required until January 1, 2019. Below is a summary:

Summary of proposed rules for capital

Revise the definition of regulatory capital components and related calculations, which would include conservative guidelines for determining whether an instrument could qualify as regulatory capital;

Add common equity tier 1 capital as a new regulatory capital component;

Increase the minimum tier 1 capital ratio requirement;

Create a capital conservation buffer that would limit payment of capital distributions and certain discretionary bonus payments to executive officers if the institution does not hold enough common equity tier 1 capital;

Provide for a transition period for several aspects of the rule; and

Incorporate the new and revised regulatory capital requirements into the Prompt Corrective Action rules.

Summary of proposed rules for risk-weighted assets

The proposal would expand the number of risk-weighted categories and increase the required capital for certain categories of assets, including higher-risk residential mortgages and higher-risk construction real estate loans. In addition, the rule would:

revise risk weights for residential mortgages based on LTV ratios and certain loan characteristics, assigning risk weights between 35% and 200%;

increase capital requirements for past-due loans from 100% to 150% and set the risk weight for high volatility commercial real estate loans at 150%; and

revise the risk-weighted percentage for unused commitments with an original maturity of one year or less from 0% to 20% unless the commitment is unconditionally cancelable by the bank.

The risk-weighted asset rule will apply to all U.S. banks and savings banks and almost all of their holding companies, although smaller, “non-complex” banking organizations will not need to comply with some of the rule’s requirements. The rule would be effective on January 1, 2015. The Company is in the process of assessing the impact of these proposed changes on the regulatory ratios of the Bank and Company.

Item 4. Controls and Procedures

As of the end of the period covered by this Quarterly Report on Form 10-Q, an evaluation was carried out by the Company’s management, with the participation of its President and Chief Executive Officer and Chief Financial Officer, of the effectiveness of the Company’s disclosure controls and procedures, as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934. Based on such evaluation, the President and Chief Executive Officer and Chief Financial Officer concluded that the Company’s disclosure controls and procedures are designed to ensure that information required to be disclosed in the reports the Company files or furnishes under the Securities Exchange Act of 1934 is recorded, processed, summarized and reported within the time periods specified in the SEC’s rules and regulations, and are effective. The Company made no changes in its internal controls over financial reporting or in other factors that materially affected, or are reasonably likely to materially affect, these controls during the last fiscal quarter ended June 30, 2012.

PART II - Other Information

Item 1. Legal Proceedings

The nature of the Company's business generates some litigation involving matters arising in the ordinary course of business. However, in the opinion of the Company after consultation with legal counsel, no legal proceedings are pending, which, if determined adversely to the Company or the Bank, would have a material effect on the Company's undivided profits or financial condition. No legal proceedings are pending other than ordinary routine litigation incidental to the business of the Company and the Bank. In addition, to management's knowledge, no governmental authorities have initiated or contemplated any material legal actions against the Company or the Bank.

Item 1A. Risk Factors

Management of the Company does not believe there have been any material changes to the risk factors that were disclosed in the 2011 Form 10-K filed with the Securities and Exchange Commission on March 20, 2012.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds

None

Item 3. Default Upon Senior Securities

None

Item 4. Mine Safety Disclosures

Not applicable

Item 5. Other Information

None

Item 6. Exhibits

The following exhibits are filed herewith or incorporated by reference as a part of this Form 10-Q:

3(i) Amended and Restated Articles of Incorporation of Registrant. Incorporated by reference to Annex B of the Proxy Statement/Prospectus included in Registrant's Amendment 4 to its Registration Statement No. 333-90273 on Form S-4, filed with the SEC on April 6, 2000.

3(ii) Amended and Restated Bylaws of Registrant. Incorporated by reference to Exhibit 3(ii) to Registrant's Form 8-K filed with the SEC on November 21, 2007.

***10.1 1998 Independent Directors Stock Option Plan of The Fidelity Deposit and Discount Bank, as assumed by Registrant.** Incorporated by reference to Exhibit 10.1 to Registrant's Registration Statement No. 333-90273 on Form S-4, filed with the SEC on November 3, 1999.

***10.2 1998 Stock Incentive Plan of The Fidelity Deposit and Discount Bank, as assumed by Registrant.** Incorporated by reference to Exhibit 10.2 of Registrant's Registration Statement No. 333-90273 on Form S-4, filed with the SEC on November 3, 1999.

***10.3 Registrant's 2000 Dividend Reinvestment Plan.** Incorporated by reference to Exhibit 4.1 to Registrant's Registration Statement No. 333-152806 on Form S-3 filed on August 6, 2008 and by Post-Effective Amendment No. 1 on January 25, 2010.

***10.4 Registrant's 2000 Independent Directors Stock Option Plan.** Incorporated by reference to Exhibit 4.3 to Registrant's Registration Statement No. 333-64356 on Form S-8 filed with the SEC on July 2, 2001.

***10.5 Amendment, dated October 2, 2007, to the Registrant's 2000 Independent Directors Stock Option Plan.** Incorporated by reference to Exhibit 10.2 to Registrant's Form 8-K filed with the SEC on October 4, 2007.

***10.6 Registrant's 2000 Stock Incentive Plan.** Incorporated by reference to Exhibit 4.4 to Registrant's Registration Statement No. 333-64356 on Form S-8 filed with the SEC on July 2, 2001.

***10.7 Amendment, dated October 2, 2007, to the Registrant's 2000 Stock Incentive Plan.** Incorporated by reference to Exhibit 10.1 to Registrant's Form 8-K filed with the SEC on October 4, 2007.

***10.8 Registrant's 2002 Employee Stock Purchase Plan.** Incorporated by reference to Appendix A to Definitive proxy Statement filed with the SEC on March 28, 2002.

***10.9 Change of Control Agreement with Salvatore R. DeFrancesco, the Registrant and The Fidelity Deposit and Discount Bank, dated March 21, 2006.** Incorporated by reference to Exhibit 99.2 to Registrant's Current Report on Form 8-K filed with the SEC on March 27, 2006.

***10.10 Amended and Restated Executive Employment Agreement between the Registrant, The Fidelity Deposit and Discount Bank and Daniel J. Santaniello, dated March 23, 2011.** Incorporated by reference to Exhibit 99.1 to Registrant's Current Report on Form 8-K filed with the SEC on March 29, 2011.

***10.11 Amended and Restated Executive Employment Agreement between the Registrant, The Fidelity Deposit and Discount Bank and Timothy P. O'Brien, dated March 23, 2011.** Incorporated by reference to Exhibit 99.2 to Registrant's Current Report on Form 8-K filed with the SEC on March 29, 2011.

***10.12 Change in Control and Severance Agreement between the Registrant, The Fidelity Deposit and Discount Bank and John T. Piszak, dated March 23, 2011.** Incorporated by reference to Exhibit 99.3 to Registrant's Current Report on Form 8-K filed with the SEC on March 29, 2011.

***10.13 2012 Omnibus Stock Incentive Plan.** Incorporated by reference to Appendix A to Registrant's Definitive Proxy Statement filed with the SEC on March 30, 2012.

***10.14 2012 Director Stock Incentive Plan.** Incorporated by reference to Appendix B to Registrant's Definitive Proxy Statement filed with the SEC on March 30, 2012.
